Learning Modules

Q: What is a 'Learning Module'?

A: A Learning Module is essentially a collection of resources (documents, links, discussions, assessments, etc) in WebCT bundled into a coherent entity which you can reuse. Although you can bundle resources into simple folders, Learning Modules offer advanced options which your students can find useful, such as Action Menu Tools, Tables of Contents, ordering of documents, and more. Once created, a Learning Module can be reused in different parts of your course.

To create a Learning Module, in Build view click the **Learning Module** menu item under **Course Tools**, then click **Create Learning Module**, fill in the required fields, and click **Save**. You can then add files and links to the module by clicking on the module title from the Learning Modules menu item.
