

Dr Andrew Smart is a Reader in Sociology at Bath Spa University. He has examined various social issues relating to biomedical science, including: the use of race and ethnicity in genetic research; the governance of biobanks; the clinical and commercial development of pharmacogenetics; patient experiences of genetic testing for inherited cardiac disorders; and media coverage of human genetics. He has completed two Wellcome Trust Research Project Grants in Biomedical Ethics (working in interdisciplinary teams with colleagues at Nottingham, Oxford, Kingston and Imperial), and one Dissemination Award in Biomedical Ethics (with colleagues at Nottingham and LSE). He has numerous single author and co-authored publications in high quality journals in sociology, bioethics, law and medicine/healthcare, and in 2012 he co-authored *Governing Biobank* (Hart Publishing). He is currently developing work that further explores the intersection between ethnicity and biomedical science, looking at examples such as racialised prescribing, the representation of minority ethnic groups in biomedical research and the health implications of genetic ancestry tests.
