

Viking DNA

Steve Harding, *Turi King and *Mark Jobling
Universities of Nottingham & *Leicester, UK

But you just never know...

HOW TO AVOID A VIKING ATTACK ON YOUR WAY TO THE LIBRARY

- 1** Keep your head – don't try to reason with them (they hate softies).
- 2** Show them you don't wear a vest – you're obviously a man to be reckoned with!
- 3** If they persist head directly to the public library.
- 4** Vikings are notoriously noisy, and will be expelled forthwith!
- 5** Once the coast is clear, head down to your nearest Cains' pub and reward your ingenuity with a refreshing pint of Cains – you deserve it.

*Show them
you don't
wear a vest*

*Vikings are
notoriously
noisy*

Tell us about your narrow escapes and win an 'I KEPT MY HEAD' T-shirt!

Send your true stories to:

I Kept My Head,

Robert Cain Brewery, Stanhope Street,
Liverpool L8 5XJ or

e-mail: ikeptmyhead@cainsbeers.com

All respondents qualify to join the "Cains Survivors' Club" and receive certificates for themselves and their local pub.

Viking DNA in Northern England Project

- ◆ Part 1 - Wirral and West Lancashire (2002-2007)
- ◆ Part 2 - North Lancashire, Cumbria and N. Yorkshire (2008-2012)

08/06/2010 21:59

DNA – Messages from our ancestors

- ◆ DNA is a ‘text’ that changes slowly through time, and varies between individuals
- ◆ **Analyse DNA from skeletons**
 - ◆ ‘Real’ information about the past
 - ◆ Difficult, small sample sizes, prone to modern DNA contamination; maybe no descendants
- ◆ **Analyse modern people**
 - ◆ Easy to get samples
 - ◆ Can be unrepresentative of past populations, need methods of inference

Genetics of physical characteristics 1

- ◆ Blood groups
- ◆ Poorly discriminating and widespread
- ◆ Pigmentation, stature, facial shape
- ◆ Complex, poorly understood, wide distribution in N.Europe

Geipel J (1969) *The Europeans: an Ethnohistorical Survey*. Longmans, London

9 A Dane from Jutland, whose facial features remind one irresistibly of his forerunner, Tollund man (1)

10 An Icelandic from Reykjavik

LIVING EUROPEAN TYPES

11 A Norwegian woman

12 Max von Sydow, Swedish film actor

17 An English schoolgirl

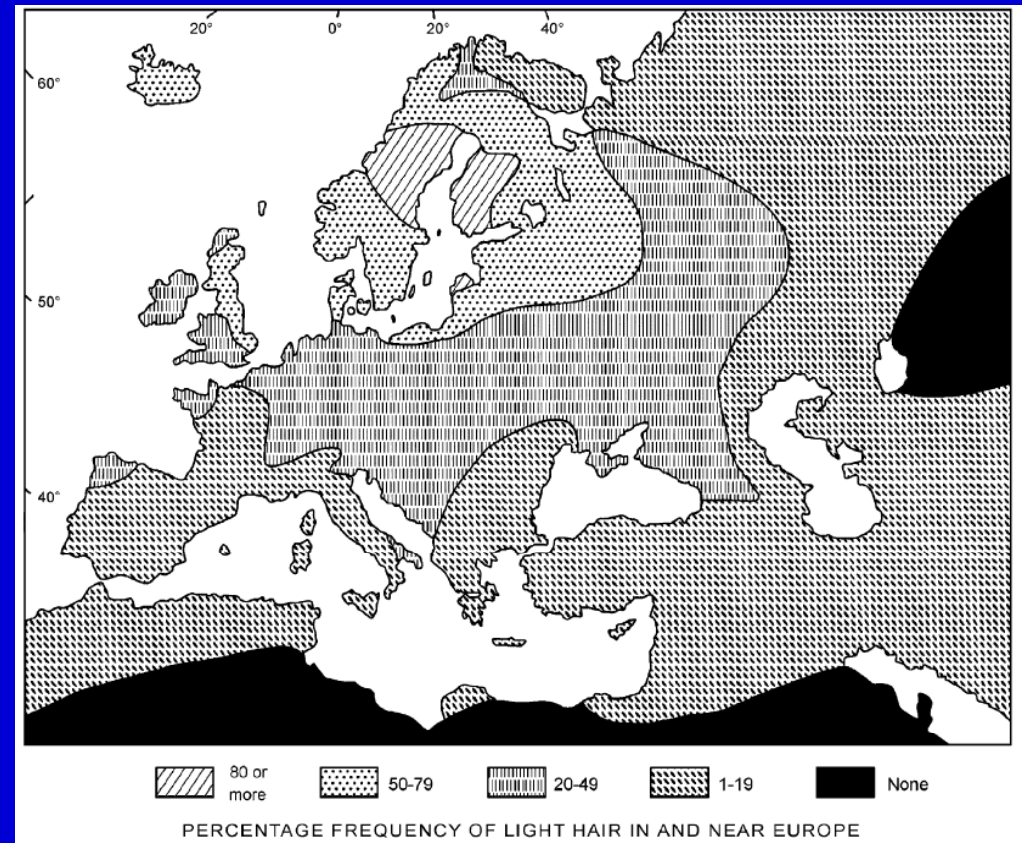

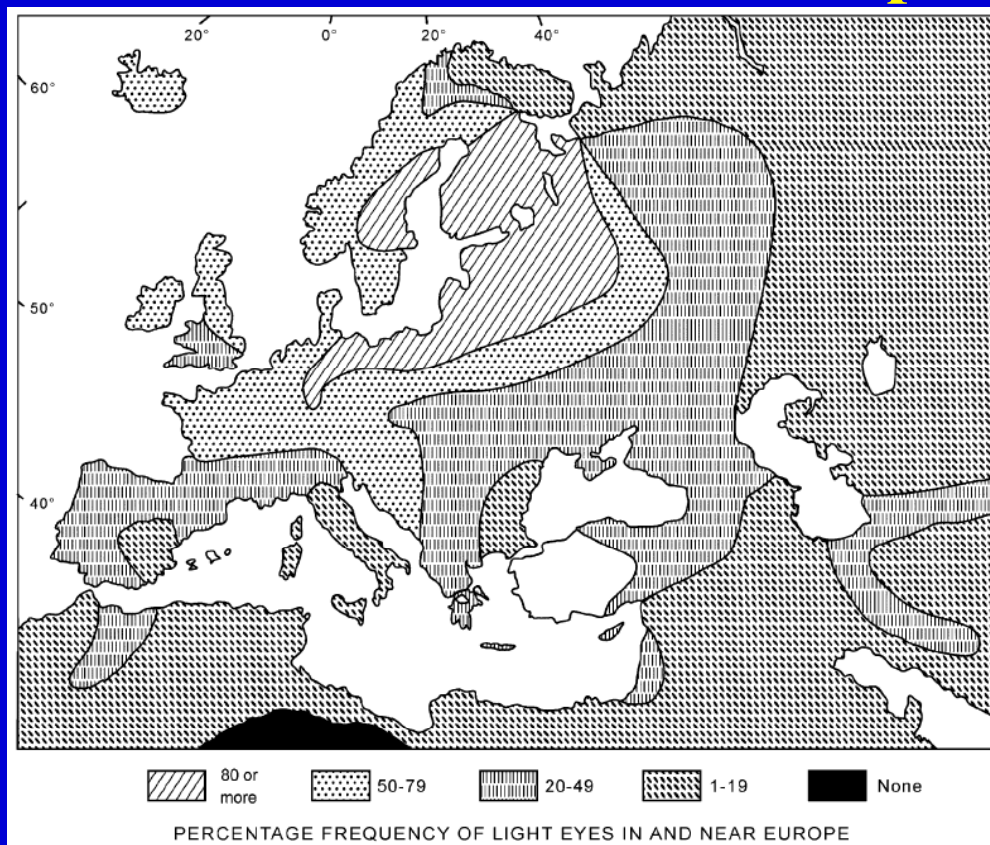

18 Ivor Emmanuel, Welsh singer

Genetics of physical characteristics 2

Genetics of physical characteristics 2

- ◆ Eye colour, hair colour, give an indicator and the genetics are now becoming better understood, but still not yet the basis for a scientific comparison

Genetics of physical characteristics 3

- ◆ **Dupuytren's / digitopalmar contracture**
- ◆ **Distribution suggests possible Viking origin**
- ◆ **Evidence from Icelandic sagas: *Longer Saga of Magnus of Orkney***
- ◆ **More frequent in regions of Britain influenced by Vikings**
- ◆ **But, crops up in other populations**
- ◆ **Fortunately there is a more powerful method of genetic enquiry as we will now see**

Genetic markers of inheritance

Chromosomes:

- ◆ Men have a Y chromosome - sex-determining
- ◆ Both sexes also have what's called mitochondrial DNA, but inherited only from mothers to offspring
- ◆ So can probe one line of ancestry for a woman (maternal line) or two for a man (maternal and paternal lines)

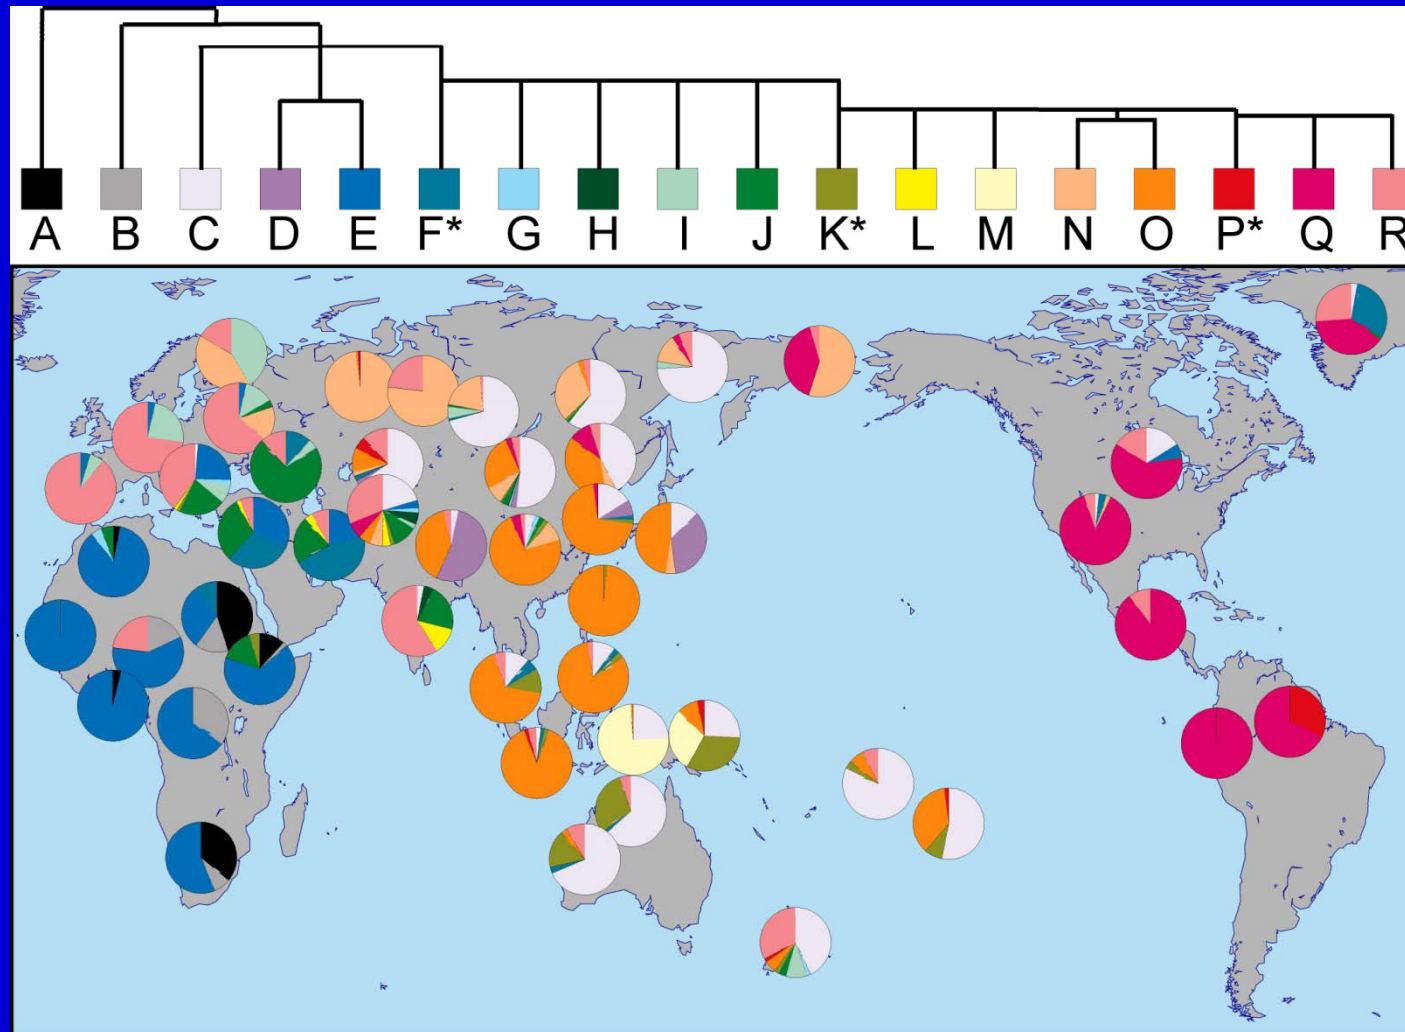

for men we look for 2 types of variations in Y-DNA

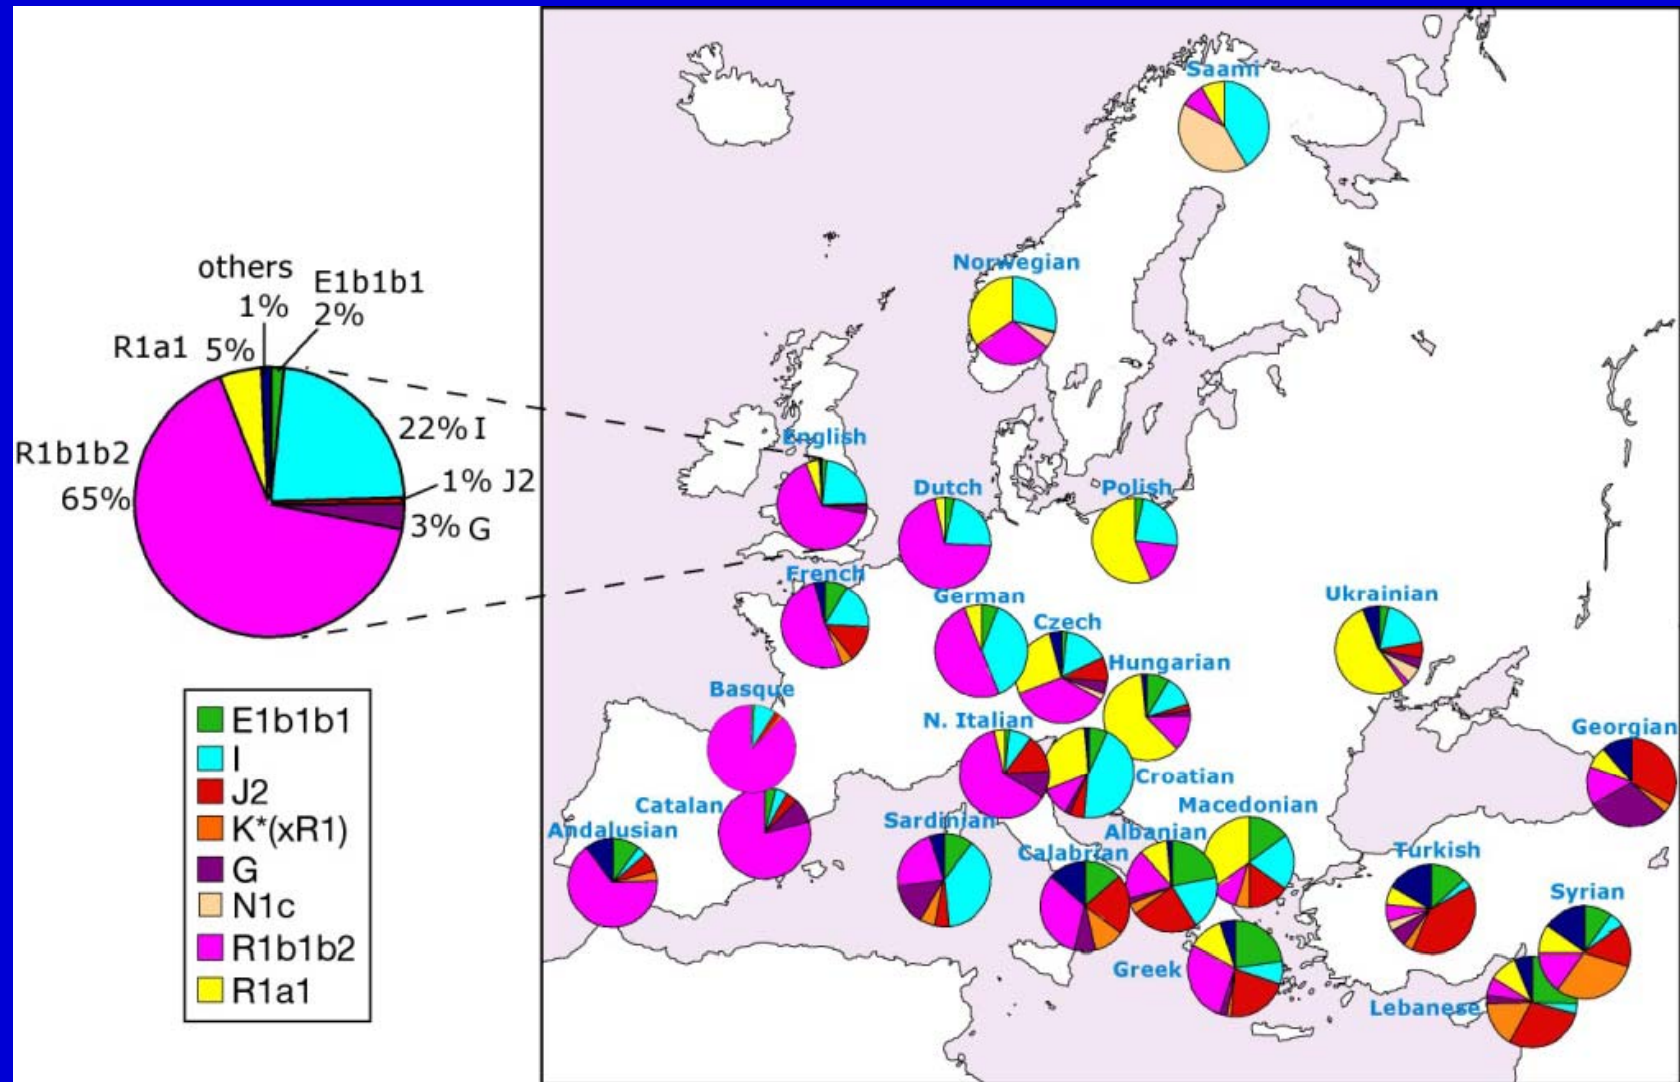

- The SNP's define a man's **HAPLOGROUP**
- The STR's define a man's **HAPLOTYPE**

The major haplogroups – continents show major differences

In Europe we also see different distributions using sub-haplogroups

R1b- sub-haplogroups in Europe

Population Viking ancestry: admixture approaches

- ◆ Testing at an individual level gives “only an idea”
- ◆ More secure at *population* level (≥ 20 people)
- ◆ Volunteer selection and the problem of modern population movements
- ◆ 2 generation and old surname based selection criteria
- ◆ Compare distributions of Y-chromosome types – “Admixture analysis”
- ◆ Resolution of the method is improving all the time

Norse Viking ancestry in the British Isles: admixture approaches

- ◆ **Admixture:**
parental and
hybrid populations
- ◆ **Algorithms**
available to
estimate
proportions

Genetic evidence for a family-based Scandinavian settlement of Shetland and Orkney during the Viking periods

S Goodacre^{1,4}, A Helgason^{2,4}, J Nicholson¹, L Southam¹, L Ferguson¹, E Hickey¹, E Vega¹, K Stefánsson², R Ward^{3,*} and B Sykes¹

¹Weatherall Institute of Molecular Medicine, University of Oxford, Oxford OX3 9DS, UK; ²deCODE Genetics, Sturlugata 8, 101 Reykjavik, Iceland; ³Institute of Biological Anthropology, University of Oxford, Oxford OX2 6QS, UK

Goodacre, Helgason et al. 2005

- ◆ Analysed mtDNA and Y markers, and used admixture approach
- ◆ Close to home, male and female proportions similar, so family-based settlement
- ◆ Further afield, male-biased settlement
- ◆ Most biased in Iceland

Viking DNA in Northern England Project

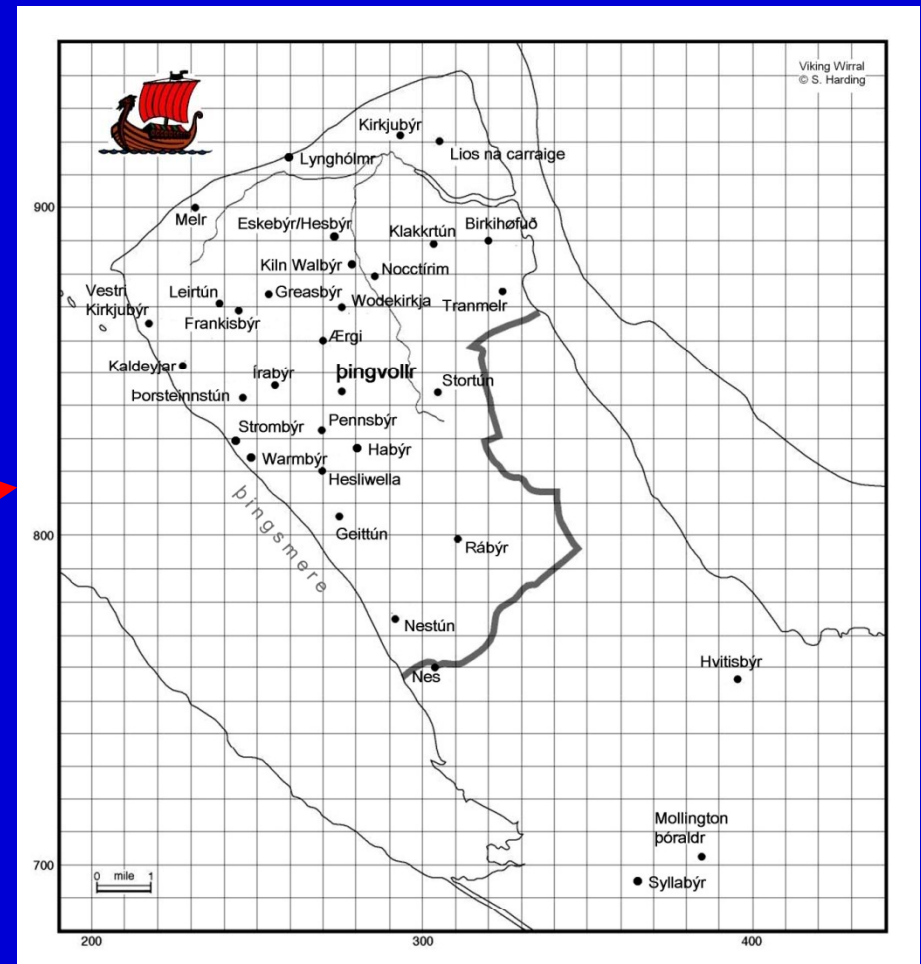

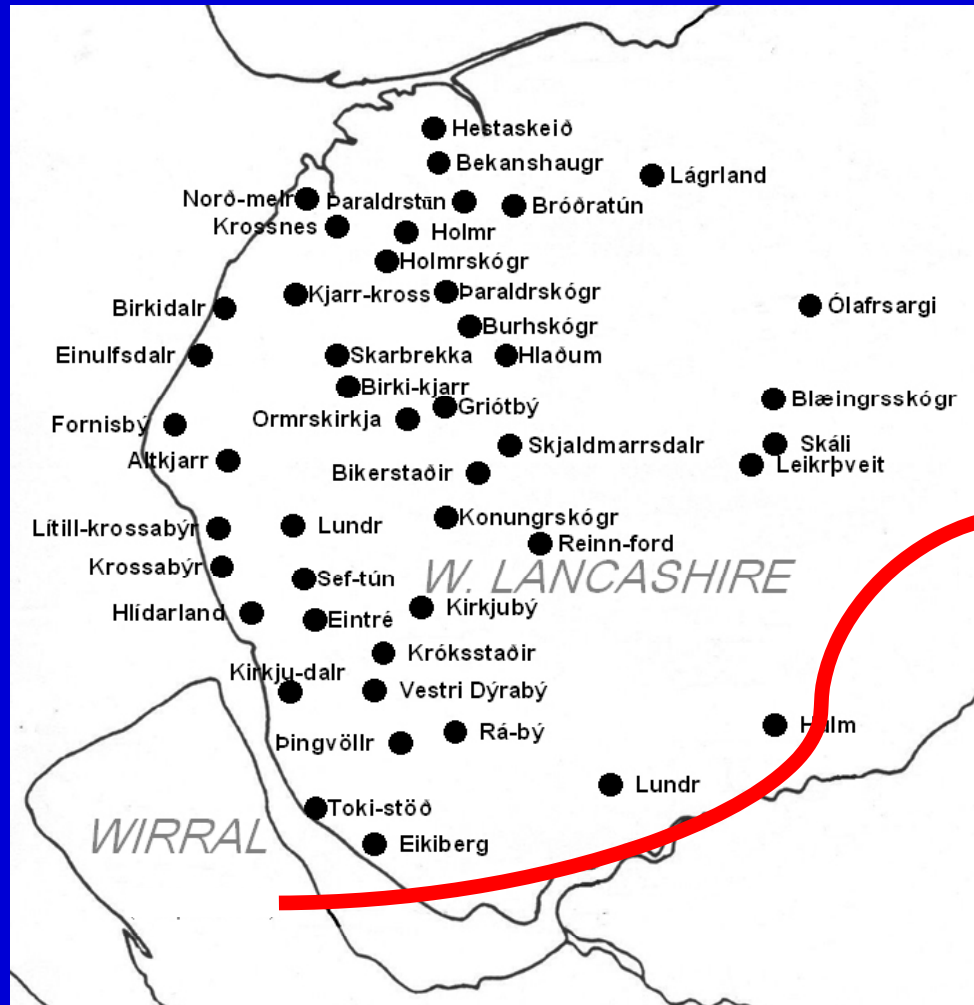

- ◆ Part 1 - Wirral and West Lancashire (2002-2007)
- ◆ Part 2 - North Lancashire, Cumbria and N. Yorkshire (2008-2012)

This map illustrates the Mersey region, highlighting Scandinavian major place-names (indicated by yellow triangles) and the Danelaw boundary (dotted line). The map includes labels for West Lancashire, Wirral, Mersey, and Mid Cheshire. Key locations marked include Ormskirk, Skelmersdale, Bolton, Liverpool, Warrington, West Kirby, Woodchurch, Flint, Ellesmere Port, Northwich, and Chester. The Dee river is also shown. An inset map of the British Isles shows the location of the Mersey region within the Danelaw.

Bowden *et al.* (2008) Excavating past population structures by surname-based sampling: the genetic legacy of the Vikings in northwest England. *Molecular Biology and Evolution*, 25, 301-309

Viking DNA in Northern England Project: Part 1. Wirral & West Lancashire

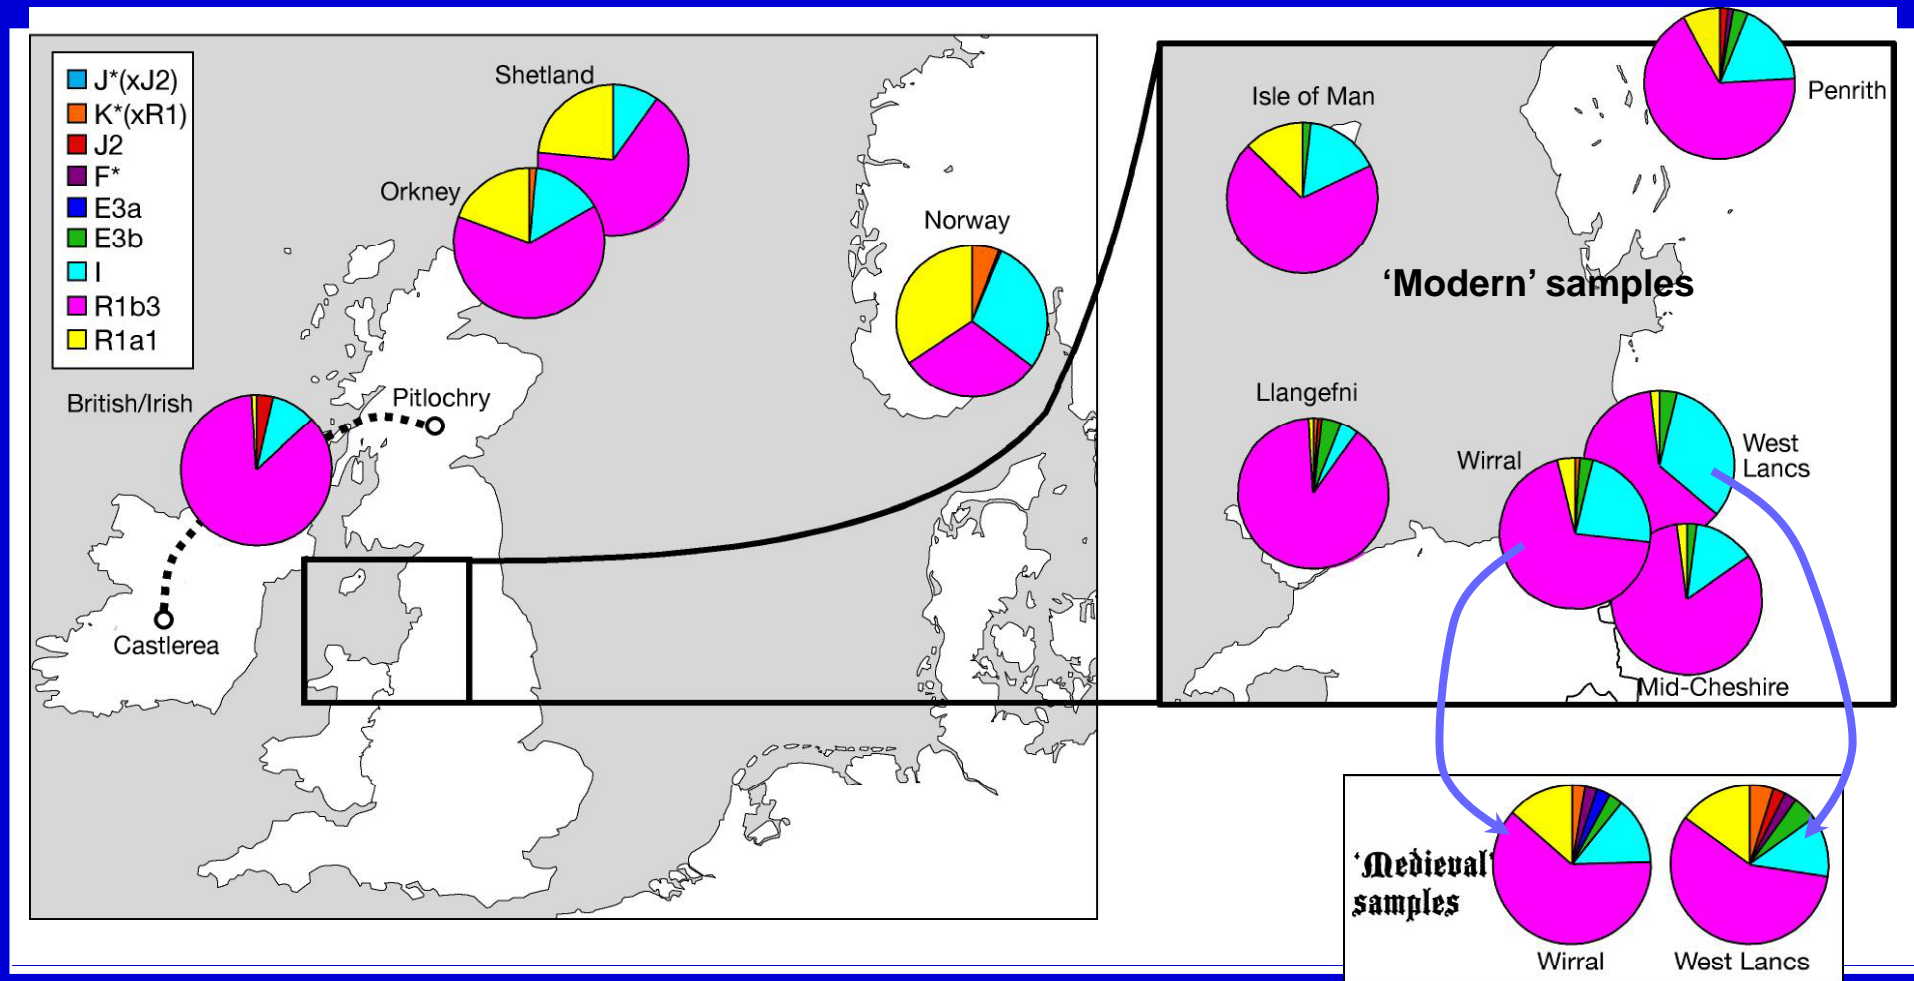

Problem of large population movement following the “Industrial Revolution”

So, we tested 2 population sets tested for Wirral and West Lancashire

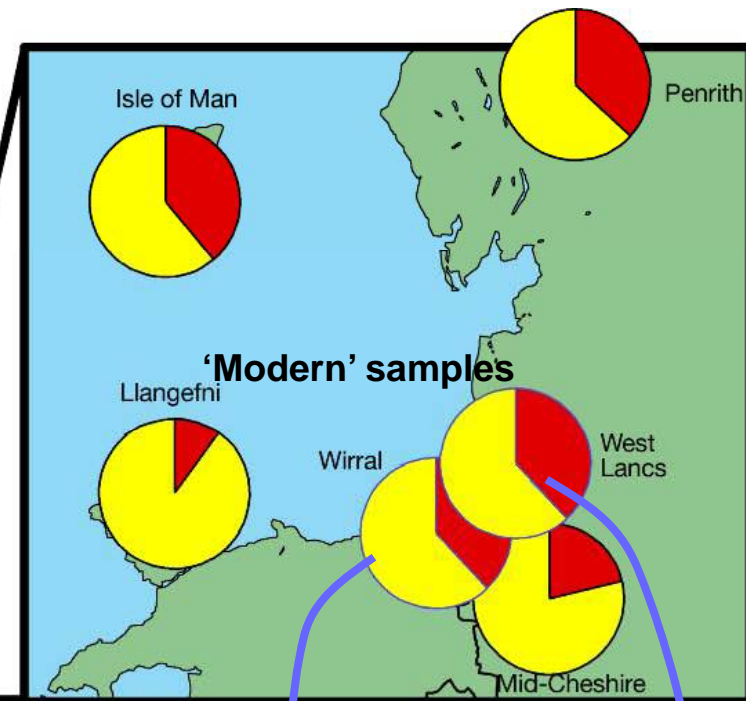

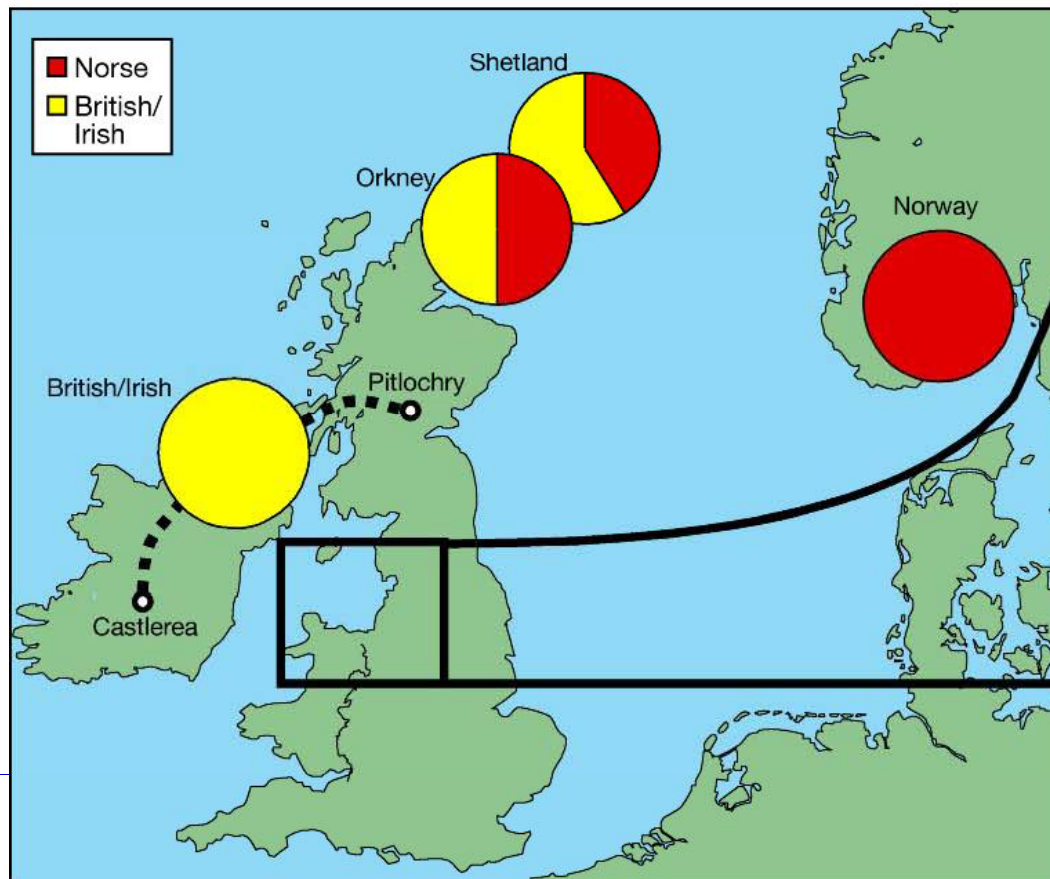

- “Modern” – men whose parental grandparents from that area
- “Medieval” – men whose parental grandparents from that area AND possessing a surname present in the area prior to 1600 (Medieval tax records, criminal proceedings, lists of people paying towards salaries of priests etc.)

Y-chromosome distributions for NW England

Note increase in R1a1!

Viking admixture results

◆ Increases in 'medieval' samples

~50% Norse ancestry

Jakter på viking-gen

Forskertrioen Stephen Harding (t.v.), Turi King og Mark Jobling trenger hjelp av norske menn til DNA-undersøkelsen. Den kan fint gjen nomføres hjemme. En prøve av munnepiteceller fra innsiden av kinnet med denne pinnen er det som skal til. (Foto: Terje Størksen)

... includes “Old Norway” project

- DNA taken from 400 men with ancestry from one of 10 regions:

4 Fjord: Møre (Tingvoll) , Sognefjord, Hardangerfjord, Ryfylkefjord

3 Inland: Namdalen, Gudbrandsdalen, Hedemark

3 Coastal: Trondheim, Bergen, Stavanger

- Results will tell us about regional differences in “old Norway” – expected to be significant before the railways etc. were built

- And also provide improved Norwegian Viking control data for the North of England Project

- Results out in 2012

Perspectives

- Individual tests are interesting but you have to be careful.
- **More powerful on a population basis: The results confirm the belief that the coastal regions of North-West England were once heavily settled by Norse Vikings**
- Sampling strategy important in linking old genes with modern geography; surname method is very useful in Great Britain but only for male history
