

Glasshouse & Controlled Environment Trials School of Biosciences

The Glasshouse and CE room trials are based at Sutton Bonington and consist of >40 glasshouse compartments and >40 controlled environment growth rooms. The facilities offer growing conditions which can be set to suit any plant, crop or climate. Trials may be based on drought, light, salinity, toxic soils, CO₂ and many other considerations. In addition to research support, we grow plant material for teaching purposes. Our experienced technicians have a very versatile skill set and experience, this enables us to support several Divisions' research and teaching as it evolves.
