

## Careers in Nutrition

A degree in Nutrition can lead to a number of career choices:

- Nutritionist in food manufacturing and for supermarket chains
- Public health nutritionist
- Health education
- Media/public relations/journalism specialising in health and nutrition sectors

The science base of this degree is a good springboard for higher degrees including Postgraduate Diploma in Dietetics, Masters in Public Health, or a PhD.

Many of our graduates are interested in careers in the Health Service. Graduates in nutrition may work as dietetic assistants and are qualified to work with patients if supervised by a dietitian. In order to become a dietitian a BSc Nutrition graduate should consider further study via postgraduate Diploma in Dietetics.

Alternatively, you may wish to consider our four-year undergraduate integrated Master's degree in Nutrition (B401) which leads to eligibility for State Registration in dietetics.
