Nottingham's Innovation Event

Raising Money & Modelling Cash flows

Professor David Park

Supported by Experian

Modelling the cash in and out of your new venture is a critical aspect of creating both a credible business plan and a successful pitch.

This video will introduce a very simple way of creating an initial cash flow forecast and highlight how this model can then be used to explore key questions related to pricing, managing risks and exploring alternative strategies for investment and growth.

This video will also identify a variety of potential sources of cash / support for the budding entrepreneur with an overview of the pros and cons of each.

What you will need to develop your [thing]?

- People (technical, legal, financial, leadership, etc)
- Equipment
- Raw materials
- Relevant Contacts (internal & external)
- Strategic alignment
- Credibility
- Time
- •???

Money

- Friends, family, fools
- Crowdsourced
- Banks (Loans, Credit Cards, Mortgage)
- Angel Investors
- Venture Capitalists
- Charities & Foundations
- Government (regional, national, supranational)
- Retained earnings (internal business case)
- •???

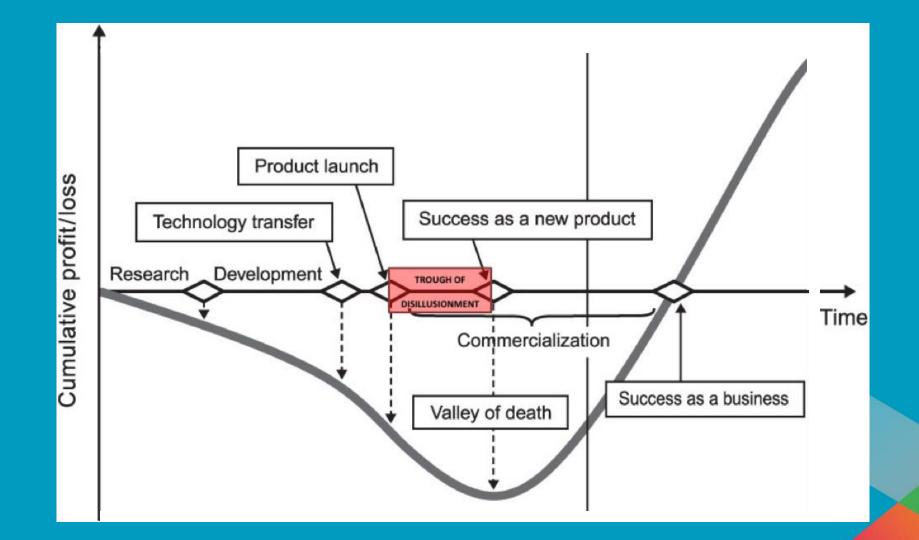

- What type of organisation are you?
- What stage is your business at?
- What level of cash do you need?
- Do you need something other than cash?
- What are your strategic goals? (growth, exit, etc)

 Align your efforts to gain investment with the right source(s) whenever possible

Haydn Green Institute for Innovation and Entrepreneurship

The "Valley of Death"

Current & future cash in your company?

Become obsessed with cash flow

- Cash IN
- Cash OUT
- What's in the Bank?
- Model and project this
- Regularly monitor this
- Actively run scenarios / what ifs?

- Staff (salary, pension, PAYE, bonuses, etc)
- Rent
- Capital Expenditure
- Manufacturing costs
- Distribution costs
- IT & Telephony
- Marketing & PR
- Travel & Subsistence
- Finance & Accounting (bank fees, accounting fees, taxes, etc)
- Legal (advice, patent costs, etc)
- •???

What are your sources of future income?

- Investment(s)
- Grants
- Loans
- Sales Income (Goods or Services)
- Government tax incentives (eg R&D Tax Credit)
- What's the lead time from invoicing or filling a claim to receiving the cash in your business account?

Create an initial Cash Flow – eg Excel

Ingenui

- Cash Flow
 - Will the business be able to cover costs as they arise?

Sustainability

• Will the business survive over the long haul?

Profitability

- Will the business generate a surplus, and if so when?
- Profit and loss forecasts / breakeven chart

Haydn Green Institute for Innovation and Entrepreneurship

Excel Worksheet / Template

Ingenuity 19

Please see additional Excel worksheet resource for further details

Havdn Green Institute

- Your timeline is important for an investor
- Investors may be looking for a considerable return on their investment
- Identify potential exit points (pros, cons, risks, etc)

• A multiple of future income or profit (Very sector and stage of market specific)

Some valuation of your market share / user base

Look at similar deals

• "What will the market pay?"

• Costs

- Your own experience
- Go and ask potential suppliers / partners
- Ask someone who's already doing something similar
- Income / Sales
 - Primary data
 - Secondary data
 - Top down and bottom up market segmentation
 - Pilot trials / tests (or other research)

• Web search

- Annual returns for similar companies / charities
- Sector specific trade journals / conferences etc
- Industry bodies
- Business and Tech press (physical / online)
- Commercial market research reports (may be free if you're University student / staff)

You *can* produce a credible first guesstimate
It's critical to sense check this with others
You *will* need to iterate your initial cashflow (too expensive? too little resource? etc, etc)

Remember to run alternative scenarios (lower / delayed income, higher costs, etc)
Present a *summary* in any pitch or plans
Use appropriate visuals

Haydn Green Institute for Innovation and Entrepreneurship **Key Lessons for the Real World?**

Ingenuity 19

You must generate a cashflow (and then model multiple scenarios)

Try and get as much real world data as possible

Strategically think about using the right type of finance

Continue to monitor and model your financial position over time

Identify the data you need to model more accurately

Explore alternative scenarios ("optimistic" & "pessimistic")

Consider preferred funding options & potential exit scenarios

Thank you very much for watching and good luck as you begin to work through the various stages of seeking financial support and developing your own cash flow
