Radboudumc

Conflict of interest: I am a radiation oncologist

Selecting for radiation therapy

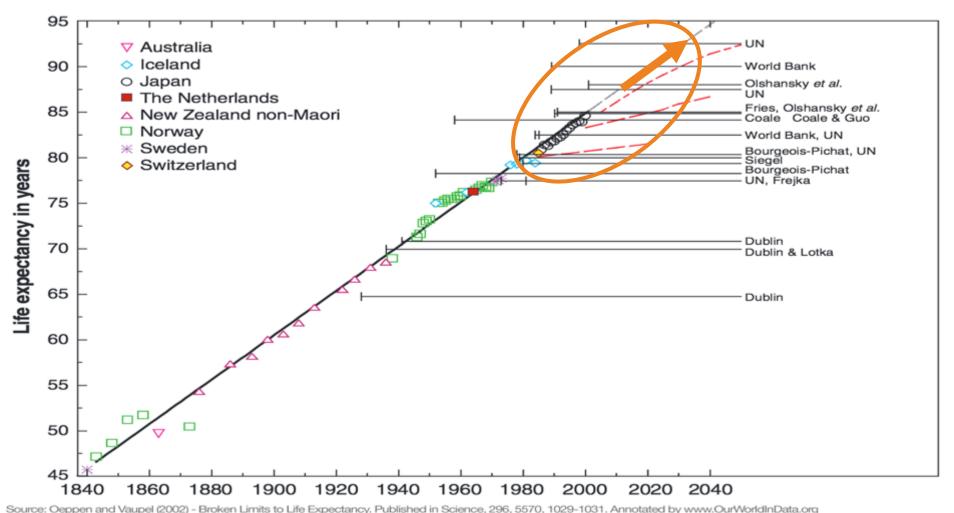

1. Introduction

- 2. The role of radiation therapy
- 3. A particular case
- 4. Discussion
- 5. Conclusions

Record female life expectancy from 1840 to the present – Oeppen and Vaupel (2002)

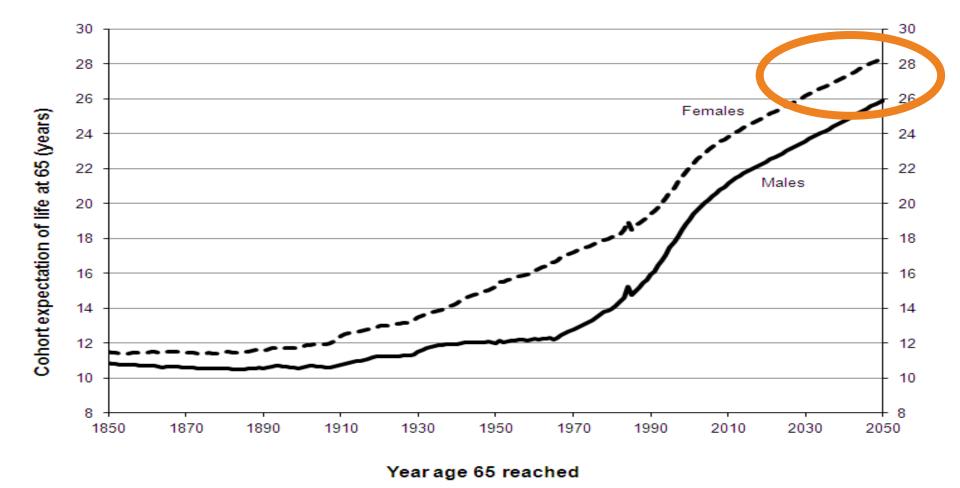

Shown is the record female life expectancy and the country with the highest female life expectancy at each point in time.

- The linear-regression trend is depicted by a bold black line (slope = 0.243) and the extrapolated trend by a dashed gray line.
- The horizontal black lines show asserted ceilings on life expectancy, with a shorter vertical line indicating the year of publication.
- The dashed red lines denote projections of female life expectancy in Japan published by the United Nations in 1986, 1999, and 2001.

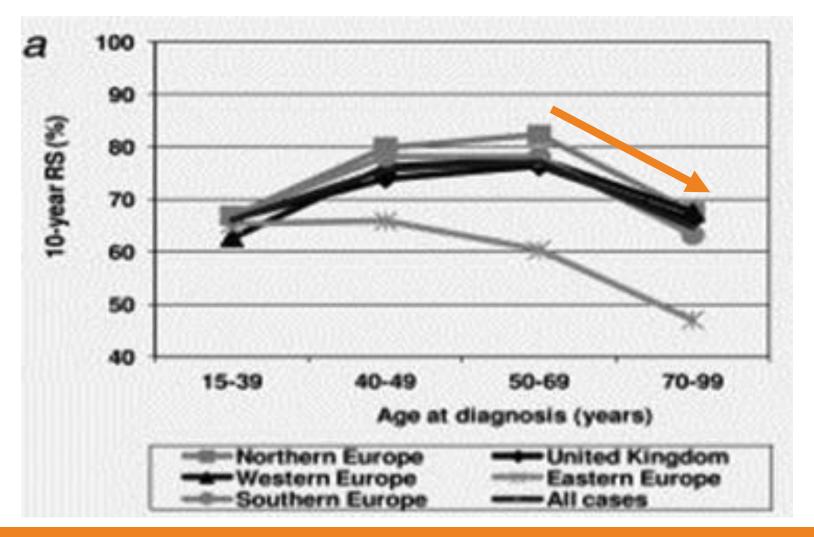

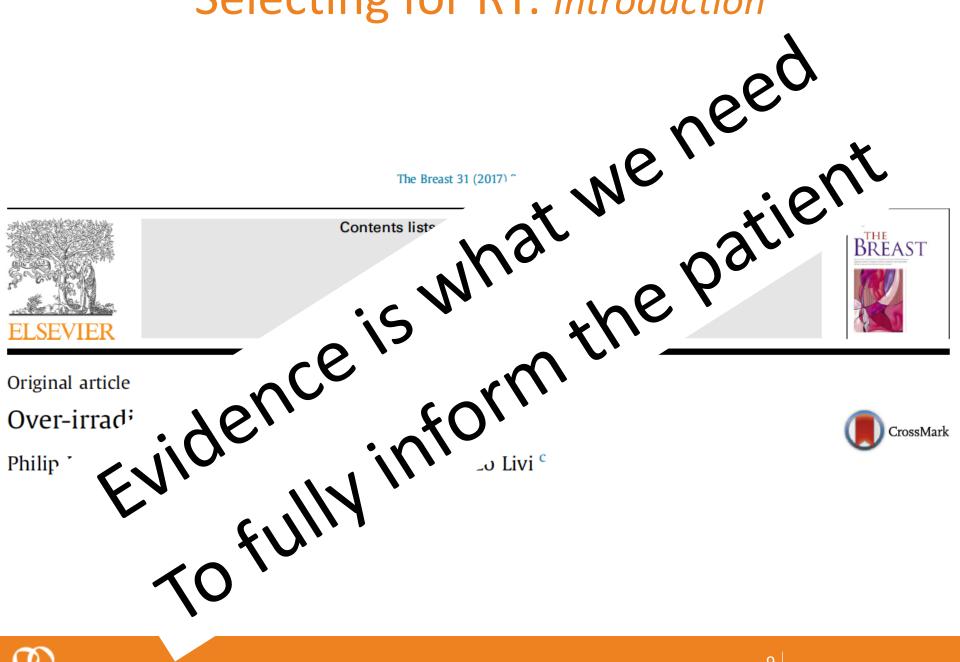

Cohort expectation of life at age 65 according to historic and projected mortality rates, persons who reached age 65 1850–2050, England and Wales

Predicted relative survival up to 10 years after diagnosis for European women with breast cancer in 2000-2002

Selecting for radiation therapy

- 4. Discussion
- 5. Conclusions

Effect of radiotherapy after breast-conserving surgery on 10-year recurrence and 15-year breast cancer death: meta-analysis of individual patient data for 10 801 women in 17 randomised trials

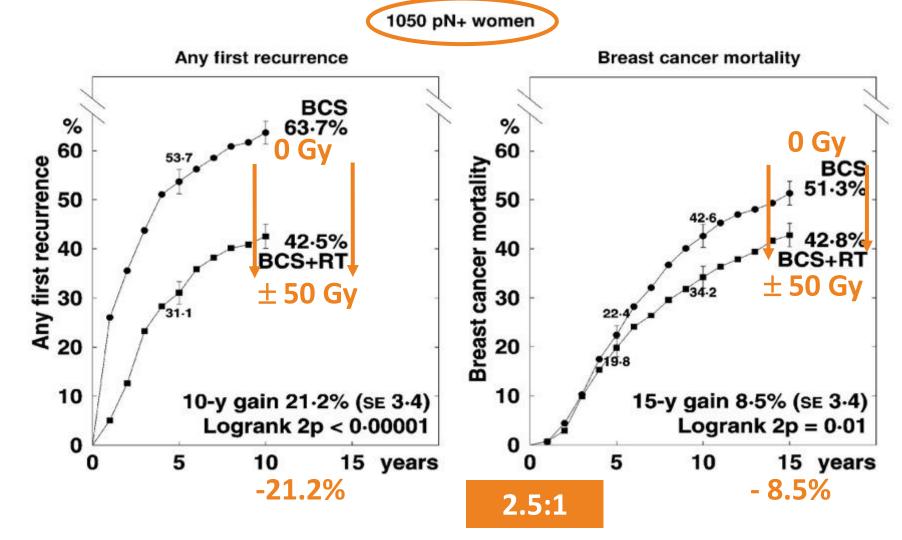

Early Breast Cancer Trialists' Collaborative Group (EBCTCG)*

Lancet 2011; 378: 1707-16

Effect of RT after BCS on recurrence and breast cancer mortality in pN0 women.

Effect of RT after BCS on recurrence and breast cancer mortality in pN+ women.

RT after tumourectomy: not always required?

Overview of prospective clinical trials evaluating postoperative radiation therapy omission.

Author, Year	Patients	Study design	Local relapse	DFS	OS	Median FU
Fisher et al., 2002 [11]	1009	TAM vs. placebo + RT vs. TAM + RT	16.5% vs. 9.3% vs. 2.8% (p = 0.008; p < 0.0001; p = 0.01)	-	93% vs. 94% vs. 93% (p = 0.93)	87.5 months
Fyles et al., 2004 [7]	769	TAM vs. TAM + RT	7.7% vs. 0.6% at 5 years (p < 0.001)	84% vs. 91% at 5 years (p = 0.004)	92.8% vs. 93.2% (p = 0.83)	67.2 months
Pötter et al., 2007 [9]	869	TAM/AI vs. TAM/AI + RT	5.1% vs. 0.4% (p = 0.0001)	HR 3.48 (p = 0.0021)	94.5% vs. 97.9% (p = 0.18)	53.8 months
Hughes et al., 2013 [10]	636	TAM vs. TAM + RT	9% vs. 2% (p < 0.001)	-	66% vs. 67% at 10 years (p = 0.64)	151.2 months
Blamey et al., 2013 [12]	1135	 without or with TAM without or with RT × 2 factorial design 	- 13% vs. 4% - 11% vs. 3% Both treatments 0% (p < 0.001)	_	96% at 10 years	167 months
Kunkler et al., 2013 [13]	1326	TAM/AI vs. TAM/AI + RT	4.1% vs. 1.3% (p = 0.0002)	_	93.9% vs. 93.9% (p = 0.34)	60 months

Abbreviations: DFS, disease-free survival; OS, overall survival; FU, follow up; TAM, tamoxifen; AI, aromatase inhibitors; RT, radiation therapy; HR, Hazard Ratio.

Radiotherapy or tamoxifen after conserving surgery for breast cancers of excellent prognosis: British Association of Surgical Oncology (BASO) II trial [☆]

R.W. Blamey a,j, T. Bates b,*,j, U. Chetty c,j, S.W. Duffy d,j, I.O. Ellis a,j, D. George e,j, E. Mallon f,j, M.J. Mitchell a,j, I. Monypenny g,j, D.A.L. Morgan a,j, R.D. Macmillan a,j, J. Patnick h,j, S.E. Pinder i,j

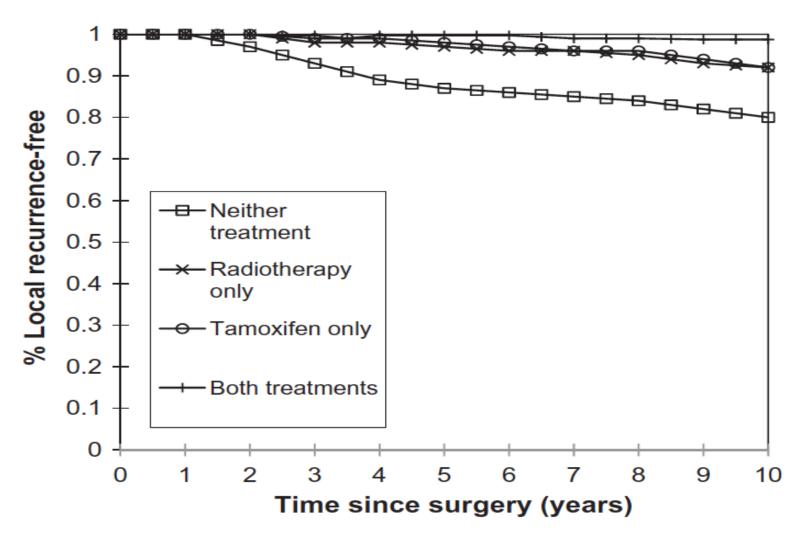

Fig. 2. Survival to first local recurrence by treatment actually received.

Even in these patients with tumours of excellent prognosis, LR after conservative surgery without adjuvant therapy was still very high. This was reduced to a similar extent by either radiotherapy or tamoxifen but to a greater extent by the receipt of both treatments.

..., LR after conservative surgery without adjuvant therapy was still very high...

Personal note:

Virtually none of those pts would get adjuvant systemic treatment according to the Dutch guidelines

RT after tumourectomy: not always required?

- 0.5% (1% still acceptable?) per year = limit for LRR

- Mind late relapses!

Role of systemic treatment?

Selecting for radiation therapy

- 1. Introduction
- 2. The role of radiation therapy

3. A particular case

- 4. Discussion
- 5. Conclusions

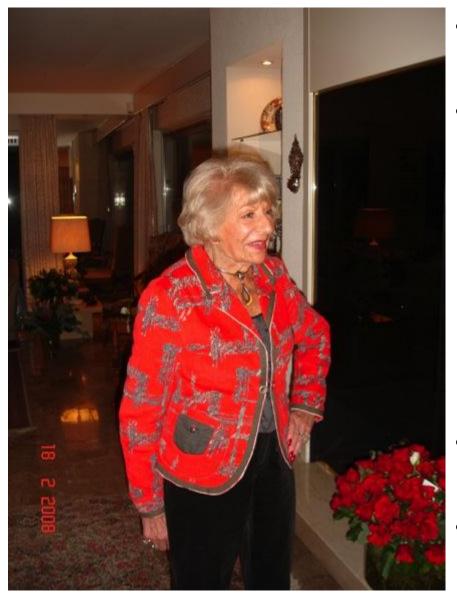

- Born in 1918 ...
- Menarche 15; G0P0A0; familiar –
- Fashion specialist kept a shop,
 smoked till 4 years before diagnosis
- Clinical history: breast reduction; hormonal replacement therapy until diagnosis (Ovestin = estriol)

- July 1996 (78 years old): she felt a large tumour laterally located in the right breast
- Biopsy: invasive ductal carcinoma

- Modified radical mastectomy:
 - 4.0 cm invasive ductal carcinoma; tumour free margins
 - Axilla: 6/12 with capsular invasion up to apex
 - ER +; PR -
- Large hematoma post-surgery →
 lymphatic drainage

- Surgeon: "Do we need to irradiate this nice old lady?"
- Rad.Onc: "Let me see and talk with her to evaluate the general condition."
 - Excellent health for the age;
 - Back pain +++: < osteoporosis; M0
 - Local-regional complaints: lymphatic drainage

- Radiation therapy: chest wall + axilla levels 3-4; 50 Gy / 25 fractions
- Tamoxifen

Follow-up

- June 1999 (after <3 years): stopped tamoxifen because of side effects
- September 2001 (after 5 years): NED;
 stopped regular FU → / 5 years
- September 2006 (after 10 years): !!!!

- Identification obligation introduced in NL
- Age was not 88 but 98 !!!!
- NED; very active; travelling much.
- Drove car about 5 x / week: driving licence prolonged for 5 years.
- Some local & regional complaints → continuation of lymphatic drainage

Follow-up:

- 2008 (after 12 years): pleural effusion → Arimidex; stopped because it was cardiac & M0
- 2008: very ill due to abdominal problem → complete recovery
- 2010: fall in shower → osteoporotic vertebral fractures
- 2011: died at the age of 103,5

Technical Basis of Radiation Therapy
Practical Clinical Applications
Fith Edition

This well-received book, now in its fifth edition, is unique in providing a detailed description of the technological basis of radiation therapy. Another novel feature is the collaborative writing of the chapters by North American and European authors. This considerably broadens the book's perspective and increases its applicability in daily practice throughout the world. The book is divided into two sections. The first covers basic concepts in treatment planning, including essential physics and biological principles related to time-dosefractionation, and explains the various technological approaches to radiation therapy, such as intensity-modulated radiation therapy, tomotherapy, stereotactic radiotherapy, and high and low dose rate brachytherapy. Issues relating to quality assurance, technology assessment, and cost-benefit analysis are also reviewed. The second part of the book discusses in depth the practical clinical applications of the different radiation therapy techniques in a wide range of cancer sites. All of the chapters have been written by leaders in the field. This book will serve to instruct and acquaint teachers, students, and practitioners in the various fields of oncology with the basic technological factors and approaches in radiation therapy.

Treatment times are shortening!

*16 Gy or 10 Gy in 2 Gy fractions sequential electron or photon boost to the tumour bed is allowed in all 3 treatment arms (boost decision to be declared before randomisation for each individual patient)

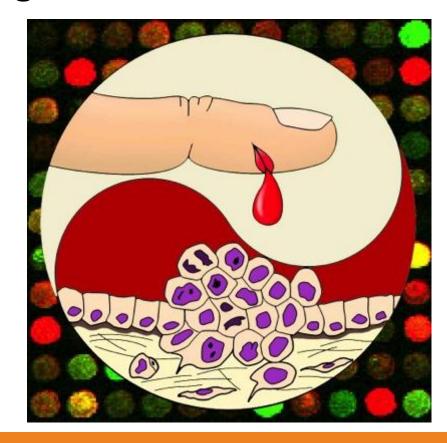

Wound Response Signature

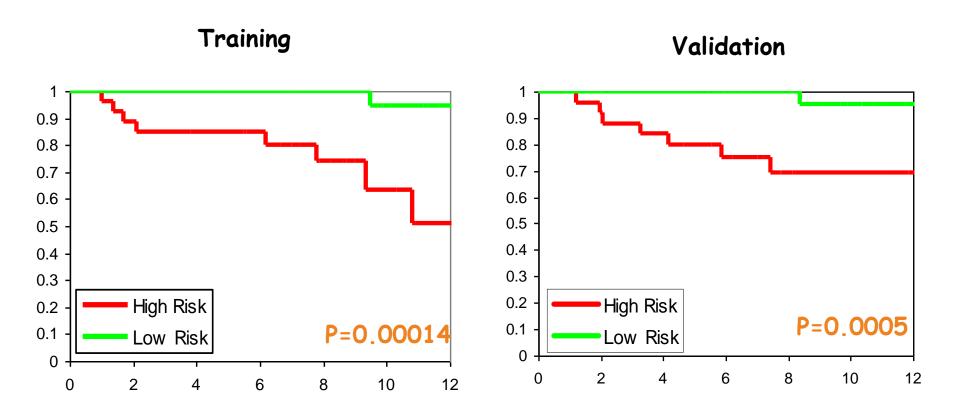

In vitro Wound Model – 516 genes

Prognostic Significance in

- Breast
- Lung
- Gastric cancer

Predict of Local Recurrence in Early Breast Cancer

Side effects

Radiation therapy:

- Inconvenience
- Skin
- Breast tissue
- Pulmonary
- Heart
- Secondary tumours
- CL breast: more

21st C, only local RT:

- $-7 \rightarrow 5 \rightarrow 3 \rightarrow 1$ weeks
- Lowered
- No boost → low
- Unlikely
- Unlikely
- Seldom
- Less for older pts/proper techniques

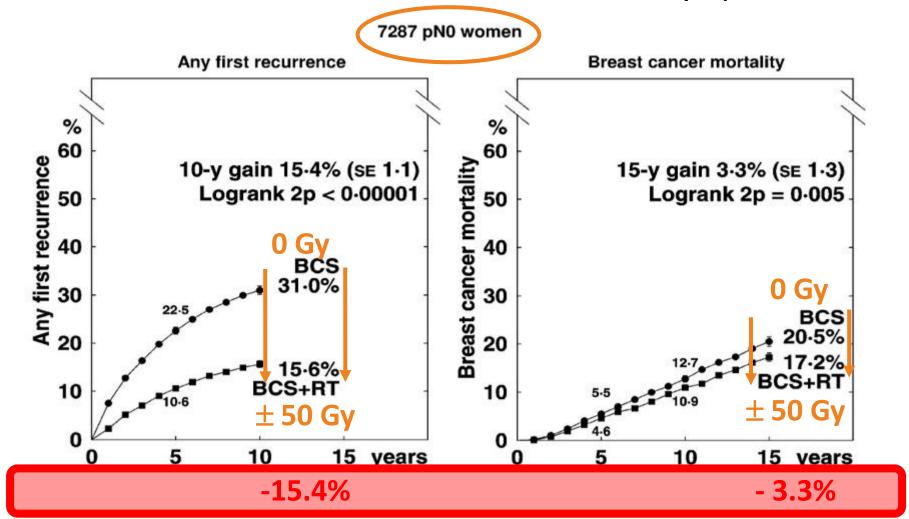

Endocrine therapy:

- Early side effects.
- Late side effects.
- Compliance.

Stage	Benefit HT	Benefit HT
(all 65y;N0;ER+;Her-)	DFS (%)	OS (%)
Tia-bG1 3	4.9-9.5	0.3-1.4
T1cC1	5.7-8.2	0.9
T1cG2	7.8-11.1	2.0
T1cG3	9.6-13.9	3.3
T2 < 3 cm G1	8.1-11.6	2.4
T2 < 3cmG2	10.8-15.7	4.3
T2<3cmG3	12.7-18.7	5.9

	T2<3cmG3	12.7-18.7	5.9

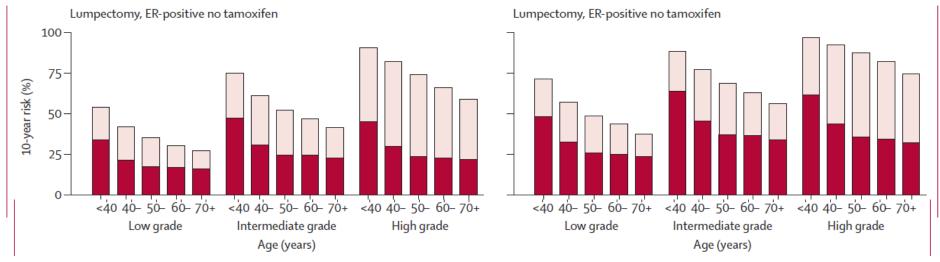

Effect of RT after BCS on recurrence and breast cancer mortality in pN0 women.

Tumour size T1 (1-20 mm)

Tumour size T2 (21-50 mm)

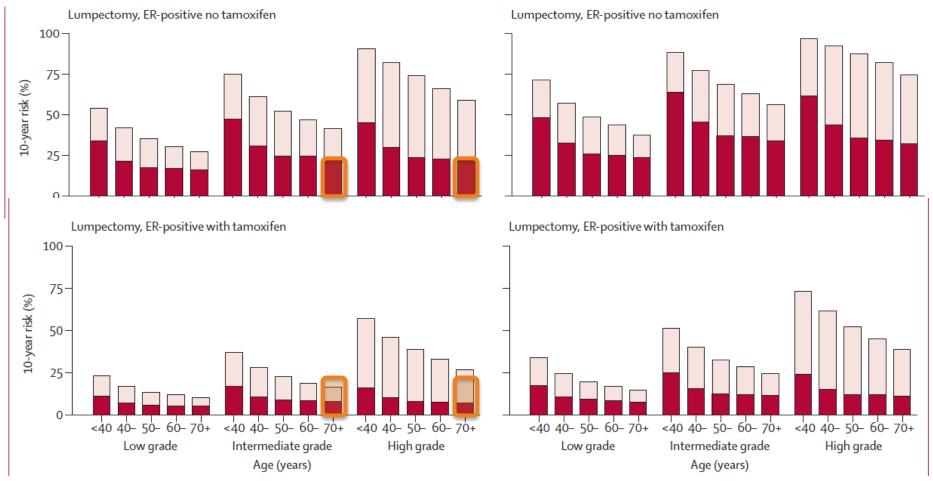

Figure 4: Absolute 10-year risks (%) of any (locoregional or distant) first recurrence with and without radiotherapy (RT) following breast-conserving surgery (BCS) in pathologically node-negative women by patient and trial characteristics, as estimated by regression modelling of data for 7287 women

Tumour size T1 (1-20 mm)

Tumour size T2 (21-50 mm)

Figure 4: Absolute 10-year risks (%) of any (locoregional or distant) first recurrence with and without radiotherapy (RT) following breast-conserving surgery (BCS) in pathologically node-negative women by patient and trial characteristics, as estimated by regression modelling of data for 7287 women

Interaction systemic and locoregional treatments

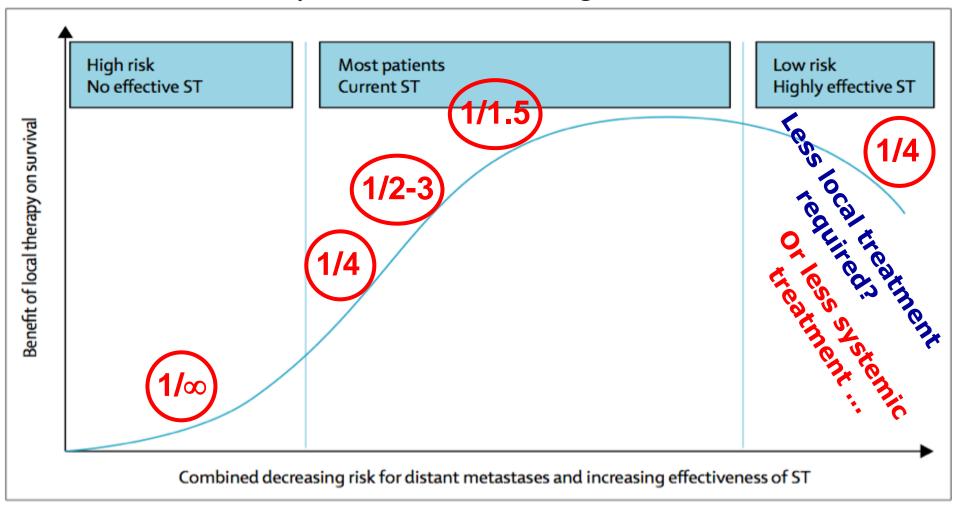

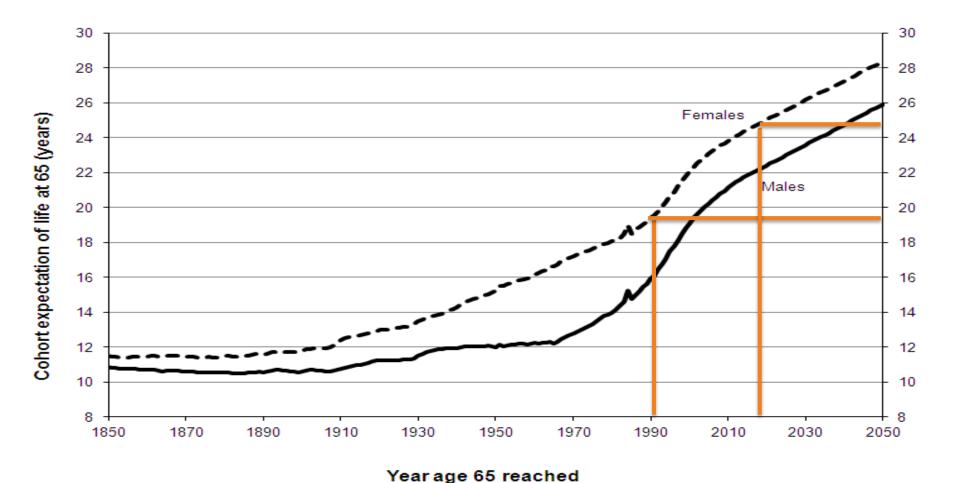

Figure: Combined hypothetical benefit of local tumour control on survival with increasing effectiveness of systemic therapy (ST) and decreasing risk of distant metastases of the primary tumour

Cohort expectation of life at age 65 according to historic and projected mortality rates, persons who reached age 65 1850–2050, England and Wales

Selecting for radiation therapy

- 1. Introduction
- 2. The role of radiation therapy
- 3. A particular case
- 4. Discussion

5. Conclusions

1

Estimate life expectancy

2

Define tumour risk

3

Shared decision making

Early stage, low risk

Short life expectancy:

- Surgery alone
- Endocrine alone
- Nothing?

Long life expectancy:

- Surgery + RT

Early stage, low risk

Study information Outline form			Outline form
Title	Partial Breast Irradiation versus Endocrine Therapy for women age ≥70 years with Luminal-A early stage breast cancer: a randomized phase III trial comparing Quality of Life by Patient Reported Outcome Measures		
Short title (max 50 characters)	APBI or ET for elderly with early breast cancer		
Study Number	EORTC-1625 QoL-ROG-ETF-BCG	Leading Group	EORTC ROG

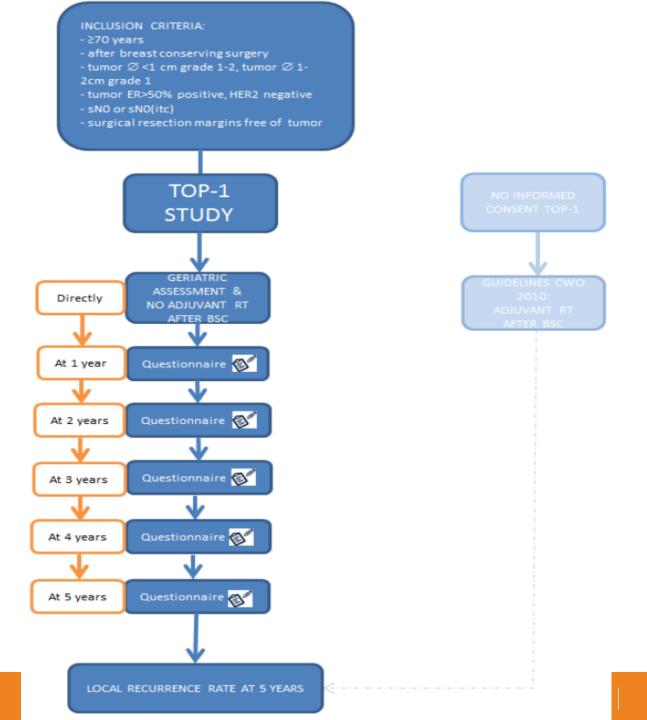

Early stage, low risk

Tailored treatment in Older Patients

TOP-1: Omission of radiotherapy in elderly patients with low risk breast cancer

Early stage, with risk factors

Short life expectancy:

- Surgery with
- Systemic T?
- RT?

Long life expectancy:

- Surgery with
- Systemic T
- RT

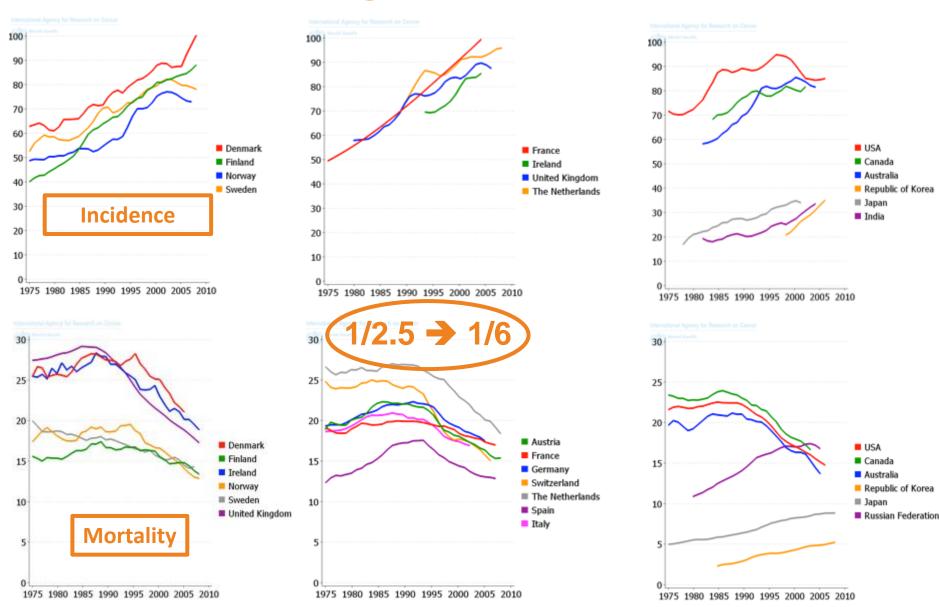

Advanced stage, with risk factors

Short life expectancy:

- Surgery with
- Systemic T
- RT

Long life expectancy:

- Surgery with
- Systemic T
- RT

We should mind not to kill our patients by kindness.
