

## **University of Nottingham Contributory Pension and Assurance Scheme (the “Scheme”)**

### **Annual Engagement Policy Implementation Statement**

#### **Introduction**

This statement sets out how, and the extent to which, the Engagement Policy in the Statement of Investment Principles (‘SIP’) produced by the Trustee of the Scheme has been followed during the year to 31 July 2025. This statement has been produced in accordance with the Occupational Pension Schemes (Investment and Disclosure) (Amendment and Modification) Regulations 2018, the subsequent amendment in The Occupational Pension Schemes (Investment and Disclosure) (Amendment) Regulations 2019 and the statutory guidance on reporting on stewardship in the implementation statement dated 17 June 2022.

The statement is based on, and should be read in conjunction with, the relevant versions of the SIP that were in place for the year to 31 July 2025, which was the SIP dated March 2024 (covering the period between July 2024 and June 2025) and the SIP dated July 2025 (covering July 2025).

A copy of the latest SIP is available at <https://www.nottingham.ac.uk/hr/pensions/cpas-pension-scheme.aspx>.

#### **Investment Objectives of the Scheme**

The Trustee’s overriding objective is to invest the Scheme’s assets in the best interest of the members and other stakeholders and, in the case of a potential conflict of interest, in the sole interest of the members. Within this framework, the Trustee’s primary aim is to ensure all benefits are paid when they fall due.

Over the longer term, the Trustee would like to adopt a ‘self-sufficiency’ approach whereby the Scheme’s assets are subject to a lower level of anticipated investment risk, and there is a reduced probability of a funding deficit arising in the future. The exact asset allocation will be considered at the time. However it is expected this portfolio will target best estimate expected returns including a margin above gilts + 0.6% p.a. consistent with achieving the Scheme’s funding objectives.

The Trustee is comfortable that the strength of the covenant offered by the University means that they can take a degree of risk in the portfolio over the longer term and receive advice on the strength of the covenant.

#### **Policy on ESG, Stewardship and Climate Change**

The Scheme’s SIP includes the Trustee’s policy on Environmental, Social and Governance (‘ESG’) factors, Stewardship and Climate Change. This policy sets out the Trustee’s beliefs on ESG and climate change and the processes followed by the Trustee in relation to voting rights and stewardship. In order to establish these beliefs and produce this policy, the Trustee undertook investment training provided by their investment consultant on responsible investment, which covered ESG factors, stewardship, climate change and ethical investing. The Trustee keeps the policies under regular review with the SIP subject to review at least triennially - the most recent update to the SIP was made in July 2025.

The following work was undertaken during the year to 31 July 2025 relating to the Trustee’s policy on ESG factors, Stewardship and Climate Change:

## Engagement

- The Trustee believes that environmental, social, and corporate governance ('ESG') factors may have a material impact on investment risk and return outcomes, and that good stewardship can create and preserve value for companies and markets as a whole. The Trustee also recognises that long-term sustainability issues, particularly climate change, present risks and opportunities that increasingly may require explicit consideration.
- The Trustee has given appointed investment managers full discretion in evaluating ESG factors, including climate change considerations, and exercising voting rights and stewardship obligations attached to the investments, in accordance with their own corporate governance policies and current best practice, including the UK Corporate Governance Code and UK Stewardship Code. The Trustee will review the investment managers' policies and engagement activities (where applicable) on an annual basis.
- The strategic rationale of different asset classes that help the Trustee to achieve the Scheme's investment objectives and constraints remains the primary driver behind the Scheme's investment strategy. However, within this context, the Trustee is increasingly considering how ESG, climate change and stewardship issues are integrated within investment processes in appointing new investment managers and monitoring existing investment managers. Monitoring is undertaken on a regular basis and is documented periodically.
- The Trustee will also consider the investment consultant's assessment of how each investment manager embeds ESG into its investment process and how the manager's responsible investment philosophy aligns with the Trustee's responsible investment policy. This includes the investment managers' policy on voting and engagement. The Trustee will use this assessment in decisions around selection, retention and realisation of manager appointments.

Below are some examples provided by the Scheme's investment managers' outlining their engagements with companies over the year to 31 July 2025:

### M&G – Alpha Opportunities

M&G met with Orsted, a Danish offshore wind specialist, to discuss how it was advancing its approach to biodiversity given its nature positive by 2030 target and that a biodiversity metric was included in executive remuneration. As a part of the meeting M&G also requested the publication by Orsted of forward-looking milestones that could be used to measure progress.

Currently the company is gathering feedback from NGOs, academia and others, with the aim to implement its framework in January, with a first set of metrics by the end of 2025. Once Orsted has its framework and metrics in place, it said it was happy to consider biodiversity in executive remuneration, which is something we will need to revisit. In terms of climate, Orsted also said it was happy to consider publishing forward looking milestones in the run up to its SBTi approved targets.

Overall, M&G were satisfied that Orsted was taking biodiversity very seriously and stated that they would conduct a further follow up once Orsted published the initial framework and metrics in 2026.

### Ruffer – Absolute Return

Ruffer engaged with the Chief Financial Officer (“CFO”) and the VP Investor Relations at BP over the year to request additional reporting on low carbon or transition growth engines and financial reporting by business segment for greater transparency.

The CFO clarified that Ruffer is not the only shareholder (or stakeholder) asking BP to give greater insight and perhaps re-segment the financial reporting to strip the low-carbon or transition growth engines away from the traditional oil segment. She cautioned that, given the scale and scope of BP and its existing asset base (some of which will be re-purposed for sustainable aviation fuel or biofuels), the company would consider this topic over the coming 12 to 18 months before announcing anything to the market.

In Ruffer’s next meeting with BP, they plan to clarify some of the points raised by the CFO: the possibility of revised segment reporting; the key performance indicators for measuring the speed and trajectory of the energy transition; and the broad topic of capital allocation – asking how we as shareholders can gain comfort that the board and management are deploying capital in the best interests of the company. Since the CFO met with Ruffer and other investors, BP has released its annual report materials (reiterating its carbon reduction ambitions) and released additional communication which address the points about the likely total returns from renewable assets versus traditional oil and gas assets.

#### LGT – Crown Multi-Alternatives

Each year LGT conducts an assessment of the underlying managers for the strategy, which forms a part of the firm’s larger ESG due diligence, monitoring and manager engagement process. This review of managers allows LGT to facilitate active engagement with managers on ESG, highlighting excellence in implementation and flagging areas for improvement.

In the assessment, LGT asks managers about, and scores them on, four key areas of ESG practice:

- Manager commitment – the extent to which they have demonstrated their commitment to ESG through actions such as defining a policy, committing to an industry initiative like the Principles for Responsible Investment (PRI) and engaging with their portfolio companies
- Investment process – the extent to which they have formally integrated ESG into their investment processes, using it as a framework for evaluating investments and identifying areas for improvement
- Ownership – the extent to which they have exhibited active ownership through activities like defining ESG guidelines, establishing key performance indicators (‘KPIs’) or assigning ESG responsibilities for portfolio companies
- Reporting – the extent to which they have provided regular and relevant reporting on ESG on a portfolio company level and on the aggregate fund level

Managers receive a score of 1 to 4, resulting in an overall rating for each manager which is then monitored by LGT. They then actively engage with managers receiving low scores, encouraging improvement over time.

#### BlackRock

BlackRock advocate for sound corporate governance and sustainable business practices that results in long-term value creation for clients. To that end, they conduct approximately 116 and 868 engagements relating to the Buy and Maintain Credit Fund Low Carbon Equity Funds, respectively. BlackRock have mapped their engagement

priorities to specific UN Sustainable Development Goals, and can be categorised into the following areas:

- Board Quality and Effectiveness – BlackRock believes boards should aspire to meaningful diversity of membership.
- Strategy, Purpose, and Financial Resilience – BlackRock acknowledges that purpose-driven companies which effectively balance stakeholder considerations while delivering value for their shareholders have been better able to attract long-term capital and build financial and business resilience to help navigate volatility.
- Incentives Aligned with Value Creation – BlackRock supports having appropriate incentives to reward executives for delivering sustainable long-term value creation.
- Climate and Natural Capital – BlackRock asks companies to discuss in their reporting how their business model is aligned to a scenario in which global warming is limited to well below 2°C, moving towards global net zero emissions by 2050.
- Company Impacts on People – BlackRock believes sustainable business models create enduring value for all key stakeholders – employees, suppliers (and the employees of suppliers), customers, and the communities in which companies operate. In this context, they seek to understand a company's approach to human capital management.

### **Significant Voting Activity**

Following new guidance from the Department for Work and Pensions ('DWP'), the Trustee is required to define what constitutes a 'most significant vote' to guide the inclusions in this Implementation Statement.

The Trustee has decided to measure significance by holding size in the funds' portfolios and by consistency with the University's sustainability priorities/themes. The Trustee has decided to report in this Implementation Statement on votes related to material holdings (over 5% of assets in any of the Scheme's underlying investments), and will aim to focus on in the following stewardship areas:

- Climate Change: including low-carbon transition and physical damages resilience.
- Biodiversity: enhancing biodiversity and maintaining and/or reinstating natural habitats.

The Trustee has delegated their voting rights to the investment managers. Investment managers are expected to provide voting summary reporting on a regular basis, at least annually. These reports are reviewed as part of the production of this Statement.

The Trustee does not use the direct services of a proxy voter.

The Trustee has considered the voting policy of the equity managers and the Trustee deems them consistent with their investment beliefs. Over the prior 12 months, the Trustee has not actively challenged the managers on their voting activity. The Trustee has asked managers to explain the reasons behind their key voting and engagement. The voting processes of the relevant managers are outlined below.

There were no votes undertaken on behalf of the Trustee over the year to 31 July 2025 that formally meet the significant vote criteria – however the Trustee has set out votes consistent with the significant voting priorities for each individual manager that holds equities.

### BlackRock

Over the year to the 31 July 2025, BlackRock were eligible to vote at 630 meetings on 8,924 resolutions. BlackRock voted 99% of the time. Of the resolutions on which BlackRock voted they voted in favour of management 96% of the time, voting against management 4% of the time. BlackRock voted at least once against management in 23% of meetings at which they voted.

While BlackRock subscribe to research from the proxy advisory firms Institutional Shareholder Services (ISS) and Glass Lewis, they are just two among many inputs into their vote analysis process, and they do not blindly follow their recommendations on how to vote. BlackRock primarily use proxy research firms to synthesise corporate governance information and analysis into a concise, easily reviewable format so that their investment stewardship analysts can readily identify and prioritise those companies where their own additional research and engagement would be beneficial.

One significant vote on behalf of the Trustee was with respect to Meta Platforms, Inc., held on 1 April 2025 which represented 0.11%<sup>1</sup> of Scheme assets. BlackRock voted against a shareholder proposal for the Meta Platforms to disclose a climate transition plan resulting in new renewable energy capacity, expressing that the request is either not clearly defined, too prescriptive, not in the purview of shareholders, or unduly constraining on the company

### Ruffer

Over the year to 31 July 2025 Ruffer were eligible to vote at 143 meetings on a total of 2,136 resolutions, of which they voted 100% of the time. On the resolutions Ruffer voted on, they voted in favour of management 98% of the time. Ruffer voted at least once against management in 20% of meetings.

Ruffer's proxy voting advisor is Institutional Shareholder Services (ISS). They have developed their own internal voting guidelines, however take into account issues raised by ISS, to assist in the assessment of resolutions and the identification of contentious issues. Although Ruffer are cognisant of proxy advisers' voting recommendations, they do not delegate or outsource their stewardship activities when deciding how to vote on clients' shares.

Each research analyst, supported by their responsible investment team, reviews the relevant issues on a case-by-case basis and exercises their judgement, based on their in-depth knowledge of the company. If there are any controversial resolutions, a discussion is convened with senior investment staff and, if agreement cannot be reached, there is an option to escalate the decision to the Head of Research or the Chief Investment Officer.

One significant vote on behalf of the Trustee was in respect of Rio Tinto, held on 3 April 2025, which represented 0.02%<sup>1</sup> of Scheme holdings. Ruffer voted for a management resolution with respect to Rio Tinto's Climate Action Plan.

This resolution passed. Ruffer elected to approve Rio Tinto's Climate Action Plan as while the company faces sector wide challenges as a provider of raw material to the

---

steelmaking industry, Rio publish a thorough greenhouse gas emissions footprint and has set specific Scope 3 targets. The company also clearly state that its Scope 1 and Scope 2 emissions targets are not derived using a Sectoral Decarbonisation Approach but were externally assured as aligned with the goals of the Paris Agreement. Moreover, Rio provides disclosures on the key elements outlined in our climate strategy checklist.
