Clinical Phase Placements Allocation .....	2
School Responsibility .....	2
Special Circumstances .....	2

## Clinical Phase Placements Allocation

Students should be prepared to spend time at any of the following locations throughout the Clinical Phase (to gain a rounded educational experience at both large teaching hospitals and other partnership trusts):

- a. Queens Medical Centre
- b. Nottingham City Hospital
- c. Royal Derby Hospital
- d. Boston Pilgrim Hospital
- e. Chesterfield Royal Hospital
- f. Grantham and District Hospital
- g. King's Mill Hospital
- h. Lincoln County Hospital
- i. Mansfield District Hospital
- j. Various GP surgeries across the region.
- k. Highbury Hospital and various other mental health teams across the region.

The School has the autonomy to allocate any student to any location for any attachment.

### School Responsibility

The School has the responsibility of ensuring all students receive a fair and balanced allocation. The benchmark will be that a typical student (without special circumstances who lives in Nottingham) should normally be expected to spend a proportion of their clinical phases across a range of the partnership trusts and teaching hospitals listed [above](#)

Students will be randomly allocated to a placement allocation ensuring they receive a rounded educational experience.

### Special Circumstances

To comply with the regulations, students with approved Special Circumstances are still expected to experience a residential placement at a district hospital at some point in the course. The Medical School will work with the student to ensure support is in place to make this as easy as possible for the student.

All students who have been granted Special Circumstance approval will be allocated in accordance with the agreement between themselves and the School. Please refer to the [Special Circumstances policy](#)

**University of  
Nottingham**  
UK | CHINA | MALAYSIA

However, students with Special Circumstances will not be allowed to stay at one location throughout their Clinical Phase. These students will be expected to gain experience at both large teaching hospitals and other partnership trusts to help build resilience.
