MSc Rehabilitation Psychology

Overview

The MSc Rehabilitation Psychology provides education and training in research and clinical skills relevant to physical and psychological rehabilitation, chronic illness and disability.

The course is designed for psychology graduates and those working as part of a multidisciplinary team as assistant psychologists, or conducting rehabilitation research in healthcare settings.

It is also suitable as a preparation for clinical psychology training. There is a focus on clinical application throughout the course and using what you learn in practical settings.

Content

On this course, you will learn about:

- the impact of physical illness and disability on psychological functioning
- assessment and rehabilitation for people with neurological conditions
- applying psychological knowledge within a rehabilitation context
- research and clinical skills

Structure

This course can be studied on either a full-time or part-time basis. Mature students and recent graduates are encouraged to apply.

In the summer term you will carry out an independent research project in an area of your interest.

Modules

Typical modules include:

- Assessment of cognitive function
- Clinical skills
- Cognitive rehabilitation and evaluation
- Stroke
- Introduction in research methods
- Theoretical foundations of rehabilitation

Entry requirements

An undergraduate degree in psychology (2:1 or above) or a degree with psychology as a major or minor subject.

If your first language is not English you must achieve an overall IELTS score of at least 6.5 with no less than 6.0 in each element.

“The benefits from the MSc continue to shine. I would definitely recommend this course to anybody who is interested in clinical psychology, especially if neuropsychology is an area you think you might enjoy.”

Ellie Williams (2015 graduate)
