School of Physics and Astronomy

Work Experience Week 13th-17th July 2020

We are offering an opportunity for around 21 Year 12 students to spend a week experiencing the exciting world of research carried out in one of our cutting edge research groups.

The Programme will run each day Monday-Friday 09:00-16:30 and will offer a variety of experiences across the week including:

- Throughout the week, the chance to attend talks presented by expert researchers on different aspects of the work we do in Nottingham.
- A chance to learn in depth about the cutting edge research we do in Astronomy, Condensed Matter Physics, Magnetic Resonance Imaging, Particle Theory and Ultracold Atoms.
- The opportunity to have a talk discussing applying to university and covering topics such as personal statements and interview skills.
- The opportunity to interview a number of people in a research group from postgraduate students through to Professors.
- Based on the interviews undertaken and the research of a particular group you will have the chance to prepare a poster describing that research and present it at a mini conference on the final day.
