Sometimes your skin gets itchy and red. You may use cream to help your skin but sometimes this doesn’t work. Doctors, nurses and researchers are investigating ways to help with this by carrying out a research study.

**What is the study about?**

We are making new websites and apps to help families with eczema (dry itchy skin). We would like to chat to people to find out about what they would find most helpful.

**What will happen to me if I take part and what do I have to do?**

A member of the study team will chat to your parents about your experiences of eczema. They will also be asked about any information you feel you need about eczema, or may have needed in the past. If you would like to, then you could chat to the study team too.

**Do I have to join in?**

No, it is up to you whether you’d like to join in the study. You could read the longer information sheet if you would like to know more. You can talk to your family to help you decide.

**Thank you for reading this!**
