Veterinary Continuing Professional Development Programme 2020

25% off selected courses when booked by Friday 28 February 2020

nottingham.ac.uk/vet/cpd
Welcome to the University of Nottingham CPD Education Centre

Welcome to our 2020 CPD brochure.
As with previous years, we have listened to the comments and requests made by delegates attending previous courses. We have tried to incorporate your suggestions and ideas when designing the programme for the forthcoming year. Your comments, both positive and negative, are most welcome and please always feel free to let us know if there is something specific which you would like us to provide and we will do our best to accommodate your requests.

In this vein, we have designed a brand-new stream of innovative CPD provision aimed at providing new graduates, career break returners or those changing disciplines with the skills to take the next positive steps in their career. We have called this exciting programme, “Stepping Stones – your next step towards clinical success”. The CPD days will combine a mixture of lectures, small group teaching and practical elements, developed and delivered by our friendly in-house CPD team of experienced practitioners, CertAVP holders, as well as our recognised specialists. The teaching has been designed to be highly applicable to first opinion practice, focussing on common presentations, with tips and tricks to help you evolve as a competent and confident general practitioner.

Our Veterinary Surgical Training Academy remains one of our flagship products. Within the Academy, our cornerstone two-day Veterinary Basic Surgical Skills Course (VBSS) runs twice a year from the Orchard Hotel and East Midlands Conference Centre, Nottingham. This course consistently receives outstanding reviews for its content and learning experience, and as a result continues to be recognised and supported by the Royal College of Surgeons (England) – an achievement for which the Academy is extremely proud.

We are also providing a number of intermediate and advanced Academy courses, and we continue to provide substantial discounts on these courses for those who have previously attended the VBSS course.

In addition, we continue to offer a broad-range of ‘standard’ one-day face-to-face courses, as well as our ever popular practical one-day courses. I am pleased to confirm that many of these courses will continue to be delivered by our small group of internationally renowned external lecturers including Gareth Arthurs, Jackie Demetriou, Rob Foale, Andrew Parry, Chiara Penzo and Stephen Shaw.

Many of our courses are offered with a 25% discount for early booking and you may book online via our website at nottingham.ac.uk/vet/cpd Alternatively, please contact one of the CPD Education Centre team at veterinary-cpd@nottingham.ac.uk or on 0115 951 6647 to book your places.

I very much look forward to welcoming you to our CPD Education Centre in 2020.

Professor Rob White
BSc (Hons) BVetMed CertVA DSAS (Soft Tissue) DipECVS SFHEA FRCVS
Sub Dean for CPD

Faculty Members

Gareth Arthurs  
PGCertMedEd MA VetMB CertVR CertSAS DSAS (Orth) FHEA FRCVS  
RCVS recognised specialist in small animal surgery (orthopaedics)  
Gareth is experienced in all aspects of small animal orthopaedic surgery and has been a recognised specialist since 2007. He works as a consultant faculty orthopaedic surgeon at Dick White Referrals, as a consultant with Veterinary Instrumentation and as Honorary Associate Professor at the University of Nottingham School of Veterinary Medicine and Science.

Jackie Demetriou  
BVetMed CertSAS DipECVS FRCVS  
RCVS recognised specialist in small animal surgery (soft tissue)  
EBVS® European specialist in small animal surgery  
Jackie has been working as a specialist soft tissue surgeon since 2002, both in academia and for the past six years as Head of Soft Tissue Surgery at Dick White Referrals. She has delivered CPD nationally and internationally throughout her career to veterinary students, interns, residents and general practitioners and has held significant roles with the European College of Veterinary Surgeons, both as exam committee member and currently as a board member.

Rob White  
BSc BVetMed CertVA DSAS (Soft Tissue) DipECVS SFHEA FRCVS  
RCVS recognised specialist in small animal surgery (soft tissue)  
EBVS® European specialist in small animal surgery  
Rob is well-recognised as one of the UK’s leading experts in soft tissue surgery and has extensive experience in all aspects of small animal surgery. He has been involved in the design and delivery of veterinary CPD for the majority of his career and in 2002, was awarded the BSAVA Simon Award for outstanding contributions to both veterinary surgery and CPD. He was appointed as Professor of Small Animal Veterinary Surgery within the School of Veterinary Medicine and Science in July 2015.
Veterinary Basic Surgical Skills Two-Day Residential Course

Thursday 26 and Friday 27 March
Or
Tuesday 20 and Wednesday 21 October
Venue: Orchard Hotel and East Midlands Conference Centre, Nottingham NG7 2RJ
CPD hours: 16
Fee: £495
Speakers: Gareth Arthurs PGCertMedEd MA VetMB CertVR CertSAS DSAS (Orth)
FHEA FRCVS
Rob White BSc (Hons) BVetMed CertVA DSAS (Soft Tissue) DipECVS SFHEA FRCVS

We believe that our Veterinary Basic Surgical Skills (VBSS) Course should be considered the cornerstone course for all surgical trainees and surgeons contemplating or currently undertaking advanced veterinary surgical training. Our course is inspired by the BSS Intercollegiate course offered and accredited by the four Royal Surgical Colleges (RCPSG, RCSÉd, RCSEng, RCSi) of the UK and has recently been endorsed by the RCSEng. Over two highly practical days, you will learn a range of essential basic surgical skills and techniques within a controlled learning environment. You will be taught to perform these skills in ways that are effective and safe.

You will participate in a variety of practical training sessions during the VBSS course, including:
- Safe handling of surgical instruments
- Laying and tying of safe surgical knots
- Tissue handling practice; skin, bowel and bone
- Safe ligation of a vascular pedicle (for example ovarian pedicle)
- Orthopaedic instrumentation including depth gauges, drill guides, power tools etc.
- Orthopaedic implants including plates and screws, K-wires and orthopaedic wire
- Principles of internal fixation including use of screws (for example lag, positional and plate) and the use of plates (for example compression, neutralisation and buttress)

This course is suitable for all veterinary surgeons anticipating a career in surgery and those contemplating or currently undertaking advanced veterinary surgical training. This includes individuals at the start of their surgical careers and those undertaking one of the currently available certificate level surgical qualifications.

Included in the course fee is one night’s accommodation, breakfast and a three course evening meal. All refreshments and lunches are included as is car parking, course notes and free Wi-Fi.

Intermediate Gastrointestinal Tract Surgery

Monday 22 June

Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD hours: 8
Fee: £755*

Speaker: Rob White BSc (Hons) BVetMed CertVA DSAS (Soft Tissue) DipECVS SFHEA FRCVS

This unique and comprehensive Veterinary Surgical Training Academy’s intermediate level course covers the basic and intermediate techniques of suturing, instrument handling and stapling when used to perform gastrointestinal tract surgery in small animals. It is a practical hands-on intensive one-day workshop covering the full range of commonly performed gastric and small and large bowel procedures. These are fundamental techniques that all general small animal surgeons should know and be proficient to perform confidently and safely. During the workshop the techniques will be explained and demonstrated before each delegate is able to carry out the procedure themselves under close supervision. You can expect to carry out all fundamental surgical wound closure techniques. During the workshop each technique will be explained and demonstrated before each delegate is able to carry out the procedure themselves under close supervision. You can expect to carry out numerous fundamental surgical procedures during the day with emphasis on how each procedure can be performed in a reliable and safe manner.

*This course is priced at £805 for those who have attended the Veterinary Basic Surgical Skills Course

Kindly sponsored by Veterinary Instrumentation

Intermediate Wound Closure and Reconstructive Surgery

Wednesday 24 June

Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD hours: 8
Fee: £905*

Speaker: Jackie Demetriou BVetMed CertSAS DipECVS FRCVS

This unique and comprehensive Veterinary Surgical Training Academy’s intermediate level course covers the basic and intermediate concepts and techniques of wound closure and reconstructive surgery in small animals. It is a practical hands-on intensive one-day workshop covering the full range of fundamental commonly performed wound closure techniques. During the workshop each technique will be explained and demonstrated before each delegate is able to carry out the procedure themselves under close supervision. You can expect to carry out all fundamental surgical wound closure techniques during the day with emphasis on how each procedure can be performed in a reliable and safe manner.

Introduction to Stifle Surgery

Monday 14 September

Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD hours: 8
Fee: £600 per day or £1000 for both Hip and Stifle Days*

Speakers: Gareth Arthurs PGCertMedEd MA VetMB CertVR CertSAS DSAS (Orth) FHEA FRCVS

This highly practical one-day basic course will be dedicated to understanding and performing the most commonly performed stifle procedures.

Topics to be covered include:
- Refresher of stifle anatomy
- Refresher of how to diagnose common conditions of the stifle eg cruciate disease, patellar luxation, osteochondrosis
- Overview of techniques to manage cruciate disease and patella luxation with dedicated practical exercises

Practical exercises:
- Performing a lateral stifle arthrotomy
- Identifying all the stifle intra-articular structures including menisci
- Meniscal surgery; what to do, when to do it and how to do it
- Lateral fabella extra-capsular stabilisation for cranial cruciate ligament rupture
- Tibial tuberosity transposition and femoral trochlear sulcoplasty for patellar luxation

Delegates should have experience of basic orthopaedic surgery, and cases of cranial cruciate ligament disease and patellar luxation. It is desirable to have some previous experience of stifle surgery.

*This course may be purchased as a two-day course for those who have attended the Veterinary Basic Surgical Skills Course for £900

Kindly sponsored by Veterinary Instrumentation

Introduction to Hip Surgery

Tuesday 15 September

Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD hours: 8
Fee: £600 per day or £1000 for both Hip and Stifle Days*

Speaker: Gareth Arthurs PGCertMedEd MA VetMB CertVR CertSAS DSAS (Orth) FHEA FRCVS

This highly practical one-day basic course will be dedicated to understanding and performing the most commonly performed hip procedures.

Topics to be covered include:
- Refresher of hip anatomy
- Overview of techniques to stabilise the luxated hip with dedicated practical exercises
- How to perform successful femoral head and neck excision arthroplasty

Practical exercises:
- Surgical approach to the hip: getting it right
- Surgical technique to stabilise the luxated hip
- Femoral head and neck excision arthroplasty: getting it right

Delegates should have experience of basic orthopaedic surgery, and it is desirable to have some previous experience of hip surgery.

*This course may be purchased as a two-day course for those who have attended the Veterinary Basic Surgical Skills Course for £900

Kindly sponsored by Veterinary Instrumentation
Intermediate Elbow Orthopaedics

Monday 16 November

Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD

CPD hours: 8

Fee: £855*

Speaker: Gareth Arthurs PGCertMedEd MA VetMB CertVR CertSAS DSAS (Orth) FHEA FRCVS

This highly practical one-day intermediate course will be dedicated to understanding and performing the most commonly performed elbow procedures.

Topics to be covered:
- Refresher of elbow anatomy
- Refresher and discussion of how to diagnose common conditions of the elbow: elbow dysplasia, medial coronoid process disease, humeral condylar fissure and fracture
- Discussion of surgical techniques of the elbow including implant options and selection
- Practical exercises:
  - Medial elbow arthrotomy and intra-articular inspection
  - Medial approach to the humeral condyle for placement of a transcondylar screw
  - Lateral approach to the distal humerus for placement of a transcondylar screw and supracondylar plate
  - Stabilisation of a lateral humeral condyle fracture

Learning objectives:
- Understand elbow anatomy
- Making the correct diagnosis of commonly occurring elbow orthopaedic conditions
- How to safely perform a surgical approach to the medial and lateral elbow, how to place a transcondylar screw, and techniques for stabilisation of a lateral humeral condyle fracture

Delegates should have experience of basic orthopaedic surgery, and managing cases of elbow dysplasia. It is desirable to have some previous experience of stifle surgery.

Minimum requirements:
- Previous experience of arthrotomies
- Good working knowledge and experience of locking and non-locking screws and plates

*This course is priced at £755 for those who have attended the Veterinary Basic Surgical Skills Course

Advanced Cranial Closing Wedge Tibial Plateau Levelling Osteotomy (CWO-TPLO)

Tuesday 17 November

Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD

CPD hours: 8

Fee: £1,200*

Speaker: Gareth Arthurs PGCertMedEd MA VetMB CertVR CertSAS DSAS (Orth) FHEA FRCVS

This highly practical one-day advanced course will be dedicated to understanding and performing CWO-TPLO surgery.

Topics to be covered:
- History and evolution of the TPLO technique
- Case selection
- Pre-operative templating
- The CWO-TPLO surgical procedure including tricks and tips to make the operation as safe and repeatable as possible
- CWO-TPLO surgery will be performed on plastic and cadaver bones
- Managing post-operative complications
- Post-operative radiographs; assessment and critique

Learning objectives:
- Understand CWO-TPLO theory
- How to perform the procedure safely
- How to critique post-operative radiographs, and manage complications.

Delegates should have intermediate experience of orthopaedic surgery including familiarity with making osteotomies and internal fixation of fractures. Delegates should be familiar with stifte anatomy and surgical approach, performing an arthrotomy, inspecting and resecting meniscal lesions, etc. Delegates should also understand fixation techniques including non-locking plates, compression and neutral screws, and locking plates.

Minimum requirements:
- Experience of cruciate surgery
- Experience of locking screws and plates
- Experience of non-locking screws and plates
- Experience of pin and tension band technique

*This course is priced at £1100 for those who have attended the Veterinary Basic Surgical Skills Course

Kindly sponsored by Veterinary Instrumentation and PLH Medical Ltd
Advanced Toy Breed Orthopaedics: Pelvic Limb

Tuesday 24 November

Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD

CPD hours: 8

Fee: £1200* or £2000 for both Toy Breed days

Speaker: Gareth Arthurs PGCertMedEd MA VetMB CertVR CertSAS DSAS (Orth) FHEA FRCVS

This one-day advanced course will be focussed on the challenges of orthopaedic conditions of the pelvic limb of toy breed dogs. The day will use a number of different learning formats including some lectures, review sessions, discussion and practical exercises.

Topics to be covered:

- The challenges of patellar luxation and cruciate disease in toy breed dogs
- Proximal tibial fractures in toy breeds and implant options
- Femoral neck fractures in toy breed dogs and femoral neck ischaemic necrosis / Legg-Calve-Perthes disease
- Salvage options of the toy breed hip including hip replacement and femoral head excision arthroplasty

Practical exercises:

- Surgery for patellar luxation and cruciate disease in toy breeds
- Surgery for proximal tibial fractures in toy breeds
- Surgical approach to the hip, stabilisation of femoral neck fractures and excision arthroplasty

Learning objectives:

- Understand the challenges of orthopaedic conditions of the pelvic limb of small breed dogs
- Management options for cruciate disease and patellar luxation, including concurrent, in the toy breed stifte
- Management options for proximal tibial fracture in the toy breed dog
- Approach to the toy breed hip, femoral head and neck fractures and femoral head and neck excision arthroplasty as a salvage

This is not a course for beginners. Delegates should have a reasonable experience of general orthopaedic surgery. It is desirable to have some previous experience of toy breed orthopaedics.

Minimum requirements:

- Previous experience of stifle surgery (including cruciate disease) and patella luxation in non-toy breed dogs
- Previous experience of hip surgery in non-toy breeds
- Good working knowledge and experience of locking and non-locking screws and plates, K-wire and tension bands

Kindly sponsored by Veterinary Instrumentation

Advanced Toy Breed Orthopaedics: Thoracic Limb

Monday 23 November

Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD

CPD hours: 8

Fee: £1200* or £2000 for both Toy Breed days

Speaker: Gareth Arthurs PGCertMedEd MA VetMB CertVR CertSAS DSAS (Orth) FHEA FRCVS

This highly practical one-day advanced course will be dedicated to an in-depth discussion, review and practical exercises focussed on the challenges of orthopaedic conditions of the thoracic limb of toy breed dogs.

Topics to be covered:

- Challenges of chondrodystrophy, short ulna syndrome and antebrachial growth deformities
- Challenges of distal antebrachial fractures
- Challenges of humeral condyle fractures
- Practical exercises:
  - Ulnar osteotomies for antebrachial growth deformities
  - Internal fixation of (distal) antebrachial fractures and implant options
  - Internal fixation of humeral condyle fractures and implant options

Learning objectives:

- Understand the challenges of orthopaedic conditions of the thoracic limb of small breed dogs
- A discussion of the current controversies in toy breed fracture management and options for surgical management
- Experience of the range of mini implants available for toy breeds

This is not a course for beginners. Delegates should have a reasonable amount of experience of general orthopaedic surgery. It is desirable to have some previous experience of toy breed orthopaedics.

Minimum requirements:

- Previous experience of antebrachial fractures in non-toy breeds
- Previous experience of humeral condyle fractures in non-toy breeds
- Previous experience of osteotomies
- Good working knowledge and experience of locking and non-locking screws and plates

Kindly sponsored by Veterinary Instrumentation
Applied Musculoskeletal Anatomy of the Racing Greyhound

Wednesday 5 August

Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD hours: 8
Fee: £255

Speakers: Richard Payne MA VetMB DProf AdvCertVPhys CertClinEd HonFIRVAP FRSA PAMPipeM MRCVS
Erica Gummery PhD SFHEA

This practical one-day hands-on course will focus on linking anatomy, biochemistry and exercise physiology with clinical conditions in greyhounds. The use of injury data analyses to inform best practice will also be described. The course has interactive tasks to explain the biomechanics and anatomy. Delegates will also be able to view and handle museum specimens of key areas of the MSK system in order to strengthen their understanding of MSK function and disease. There will also be a session on the MSK examination of racing greyhounds.

This course is suitable for people with working/sport dog affiliations (eg greyhound trainers, dog agility members), physiotherapists, veterinary physiotherapists, animal science course educators/students, veterinary nurses, veterinary surgeons and osteopaths.

Equine MSK Anatomy and Function

Wednesday 12 August

Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD hours: 8
Fee: £255

Speakers: Richard Payne MA VetMB DProf AdvCertVPhys CertClinEd HonFIRVAP FRSA PAMPipeM MRCVS
Erica Gummery PhD SFHEA

This practical one-day hands-on course will focus on linking anatomy, function, biochemistry and exercise physiology in the horse. The course has interactive tasks to explain the biomechanics and anatomy. Delegates will be able to perform an ultrasound examination of cadaveric horse limbs, followed by dissection. There are also stations on museum specimens of key areas of the MSK system in order to strengthen the understanding of MSK anatomy, function and disease.

This course is suitable for people working with horses in a professional capacity, eg physiotherapists, veterinary physiotherapists, animal science course educators/students, veterinary nurses, veterinary surgeons and osteopaths.

25% discount
Take advantage of a 25% discount if you book before 28 February 2020
Husbandry, Medicine and Surgery of the Pet Rabbit

Monday 14 September

Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD hours: 8
Fee: £355
Speaker: Craig Hunt BVetMed CertSAM DZooMed MRCVS

This one-day lecture-based course will cover a broad range of aspects relating to rabbit ailments and clinical techniques commonly encountered in general practice. There will be opportunity to discuss real cases and delegates are welcome to bring case material to be discussed on the day.

Husbandry, Medicine and Surgery of Ferrets, Guinea Pigs and Rodents

Wednesday 18 November

Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD hours: 8
Fee: £355
Speaker: Craig Hunt BVetMed CertSAM DZooMed MRCVS

During the course, the unique anatomy and physiology of these challenging patients will be discussed. Restraint, collection and interpretation of laboratory data, together with interpretation of imaging will be explained. Topics to be discussed include ferret endocrine disorders, rodent dentistry, hospitalisation, surgery and supportive care.

Ultrasonography – Introductory Level

Introduction to Small Animal Ultrasound
Wednesday 8 July, Wednesday 11 November
Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD hours: 8
Fee: £755
Speaker: Gary England BVetMed PhD DVetMed CertVA DVR DipECAR DipACT PFHEA FRCVS
This highly interactive and practical one-day course will focus on how to get the most out of ultrasound machines, and how to image the major abdominal organs and the heart. Presentations on each body system will consider imaging techniques, normal findings and a brief overview of common pathological changes. These are followed by practical scanning sessions supported by experienced tutors. Delegates will have the chance to use a range of ultrasound machines and get plenty of opportunity to practice their technique on live dogs.

Practical Small Animal Echocardiography – an Introduction
Wednesday 15 April, Wednesday 21 October
Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD hours: 8
Fee: £755
Speaker: Malcolm Cobb MA VetMB DVC PhD MBA FHEA MRCVS
This practical one-day course will focus on the generation and interpretation of basic cardiac ultrasound images in the dog. The course will provide an overview of the equipment and facilities needed and cover the techniques used in the generation and interpretation of right parasternal, long axis and short axis echocardiographic images. The delegates will enjoy the opportunity to carry out echocardiography in the School of Veterinary Medicine and Science’s teaching laboratory with a significant proportion of the time dedicated to practical echocardiography.

## Ultrasound – Intermediate Level

### Intermediate Small Animal Abdominal Ultrasound

**Thursday 4 June and Friday 5 June**

**Venue:** School of Veterinary Medicine and Science, Loughborough LE12 5RD

**CPD Hours:** 16

**Fee:** £1,350

**Speakers:**
- Richard Ewers BSc BVSc CertVR PGCHE DMS MRCVS
- Andrew Parry MA VetMB CertVDI DipECVDI MRCVS

This highly interactive and practical two-day course will focus on how to get the most out of an abdominal ultrasound examination (including small abdominal structures). Presentations on each body system will consider imaging techniques, normal findings and common pathological changes. These are followed by practical scanning sessions supported by experienced tutors. Delegates will have the chance to use a range of ultrasound machines and get plenty of opportunity to practice their technique on a live dogs.

The course will include:

- Review of ultrasound machine settings to optimise image
- Obtaining diagnostic images of abdominal structures (liver, spleen, stomach, small intestine, large intestine, kidneys, bladder, pancreas, adrenals, lymph nodes)
- Appreciating the appearance of common pathological changes in abdominal structures with ultrasonography
- Principles of ultrasound-guided sampling (including practice with simulators)

Kindly sponsored by IMV Imaging

Take advantage of a 25% discount if you book before 28 February 2020

## Radiology

### Understanding Thoracic and Abdominal Radiology

**Wednesday 25 November**

**Venue:** School of Veterinary Medicine and Science, Loughborough LE12 5RD

**CPD Hours:** 8

**Fee:** £355

**Speakers:** Andrew Parry MA VetMB CertVDI DipECVDI MRCVS

This course is designed for those veterinary surgeons in general practice who wish to get to grips with the basics of radiographic diagnostic interpretation. It will encompass basic physics and image production, and how this pertains to modern day computed and digital imaging options. A discussion of which cases would best be sent for CT of the thorax or abdomen will also be included.

There will be a discussion of the factors in performing radiography to improve image quality and help to produce the most informative and diagnostic radiographs safely, including an overview of UK safety guidelines.

The course will be interactive with workshops aimed at improving radiological interpretation and boosting delegate confidence.

**Learning objectives:**

- How x-rays are formed, how they interact with the patient to produce an image
- How to stay safe in the x-ray and CT rooms
- How to interpret abdominal and thoracic x-ray cases
- Which cases are good candidates for abdominal or thoracic CT

This course is designed for general practitioners and advanced practitioners in general practice that would like to refresh their thoracic and abdominal x-ray imaging. Candidates for the course should be interested diagnostic imaging, wishing to gain extra tips on how to perform thoracic and abdominal radiography as well as interpreting obtained radiographs.

**Topics to be covered:**

- Image production: the pros and cons of digital radiography and how it compares to film screen radiography
- Improving image quality with minimum effort, and how to stay safe
- Basic interpretation of radiographic anatomy, in normality and disease
- Appropriate use of CT and limitations for the thorax and abdomen

**25% discount**

Take advantage of a 25% discount if you book before 28 February 2020
Pathology

Animal Examination and Sampling Procedures in Veterinary Welfare and Forensic Cases

Thursday 10 September
Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD Hours: 8
Fee: £355
Speakers: Winsome Eu DVM DACVP MRCVS
David Martin BVSc MRCVS
Samantha Pickles PhD MCSFS

This bespoke course unifies veterinary medicine with forensic methods to provide a robust framework to support the examination of animals, both alive and dead, in welfare and abuse cases. Regardless of the condition of the animal, the documentation and recovery of evidence remain the same, although the role of the veterinary professional varies.

With a focus on exploring the issues surrounding suffering, the course will detail how to record and communicate this important concept for legal work. In addition, guest speakers will deliver unique training, including forensic photography and the sampling of both human and animal DNA, in cases of cruelty and abuse.

By cascading forensic standards to the veterinary community for the first time, Court compliant procedures will be ensured during every step of an investigation.

Cascading guidance, applicable to any animal species and type of investigation, this course will provide information on:

- Clinical examinations of living animals and post-mortem examinations of dead animals to forensic standards
- How the identification, duration and significance of animal suffering is determined
- The collection of biological evidence, the tests available, and how to submit such material
- How the documentation (in written and photographic form) should be undertaken during animal examinations

Upon completion of this course, delegates will be able to:

- Scientifically determine and record the mechanisms and durations of suffering
- Recover biological evidence and submit it for appropriate forensic testing whilst maintaining a secure chain of custody
- Effectively use photography and correctly handle digital material.

This course is suitable for those currently involved with or interested in, animal welfare investigations. Applicable to veterinary surgeons, nurses, pathologists and technicians.

Presentation of Expert Veterinary Evidence in Welfare and Forensic Cases

Friday 11 September
Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD Hours: 8
Fee: £355
Speakers: David Martin BVSc MRCVS
Samantha Pickles PhD MCSFS

In the second of two unique courses, this session will provide comprehensive Courtroom training to support the investigation of animal welfare and abuse cases.

Detailing the veterinary role from eye-witness to expert witness, this course will deliver guidance on how to accurately and effectively present evidence in both written and oral form. Supported by guest speakers, the differing instructions and requirements of various legal teams, will be explained.

In addition, the challenging topic of joint expert meetings will be discussed, alongside the opportunity to critique reports previously used in criminal cases.

Cascading guidance, applicable to any animal species and type of investigation, this course will provide information on:

- Writing an expert report: what is required and what is not
- Giving oral evidence in Court: good practice, pitfalls, tips and techniques
- Joint expert meetings: holding successful discussions and preparing reports

Upon completion of this course, delegates will be able to:

- Produce a Court compliant expert witness report for Prosecution and Defence teams
- Confidently engage in expert meetings and produce joint statements
- Successfully prepare to give expert testimony in Court.

This course is suitable for those currently involved with or interested in, animal welfare investigations. Applicable to veterinary surgeons, nurses, pathologists and technicians.

Now that chickens are the fourth most common pet in the UK it’s perhaps time to ensure you are back yard poultry ready. This one-day poultry course will be led by two poultry vets with experience in private poultry practice, the pharmaceutical industry and undergraduate/postgraduate teaching. If small flocks of hens are the only food producing animals you see in your companion animal practice you will appreciate this course covering not only endemic poultry diseases seen in back yard flocks, but also how to spot the two Notifiable Diseases of poultry and poultry diseases with public health significance. Therapeutics for small poultry flocks can be daunting but this course will delve into the treatment and prevention options available to the clinician. In the practical session performing a clinical examination and a post-mortem examination will be taught. Following on from that, sampling techniques and further laboratory testing appropriate to backyard poultry will be covered.
Practical Endoscopy

Wednesday 20 and Thursday 21 May (two-day course)

Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD

CPD hours: 16

Fee: £1800

Speakers: Mark Dunning MA Vet MB PhD CertSAM DipECVIM-CA MRCVS
Rob White BSc (Hons) BVetMed CertVA DSAS (Soft Tissue) DipECVS SPHEA FRCVS

This practical two-day hands-on course will focus on the techniques of both flexible and rigid endoscopy in the dog. The course will provide an overview of selecting and handling endoscopes and cover the techniques used in endoscopy of the upper and lower intestinal tract, the respiratory tract and lower urinary tract. The delegates will enjoy the opportunity to perform endoscopy in the School of Veterinary Medicine and Science’s wet lab and enjoy extensive hands-on opportunities over the two days.

Topics to be covered include:
- Upper intestinal endoscopy (including acquiring biopsies and foreign body removal)
- Lower intestinal endoscopy (including ileal entry)
- Upper respiratory tract endoscopy (including foreign body removal)
- Lower respiratory tract endoscopy (including endoscopic BAL and foreign body removal)
- Lower urogenital tract in the bitch

Learning objectives:
- The basic principles of endoscopy and how to select the most appropriate endoscopic equipment for intestinal, respiratory and urinary tract endoscopy
- The manipulation and direction of both rigid and flexible endoscopes in vivo
- The technique for obtaining endoscopic biopsies and endoscopic foreign body removal
- Be proficient in the J-manoeuvre
- Be proficient in negotiating the pylorus

This course is designed for veterinary surgeons with all levels of experience. It will provide invaluable experience for those who are new to endoscopy and those veterinary surgeons wanting to gain further experience with using endoscopes and refining their technique. The course would also be of value to those veterinary surgeons undertaking further professional qualifications in small animal medicine.

A Surgical Tour of the Abdomen
Monday 1 June
Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD hours: 8
Fee: £355
Speakers: Rob White BSc (Hons) BVetMed CertVA DSAS (Soft Tissue) DipECVS SFHEA RCVS

The exploratory coeliotomy is a commonly performed operation in veterinary practice. It should be regarded as an opportunity to examine the entire abdominal cavity, and surgeons should avoid the temptation to treat only the obvious lesion prior to closure of the peritoneal cavity. It is also important to biopsy relevant viscera both in cases with obvious lesions and in those showing no apparent pathology. The lectures will provide an overview of normal surgical abdominal anatomy in both the dog and cat. Video presentations will be used to show techniques that can be used to biopsy all of the major abdominal viscera. Practical tips and tricks for performing a successful exploratory coeliotomy will be stressed. In addition, lectures and video presentations will also cover some common surgical procedures such as gastrostomy, enterotomy and enterectomy. There will be an opportunity to practice some of these techniques in the dry lab setting.

Medicine Made Simple – A Case-Based Approach for Primary Care Practitioners
Thursday 9 July,
Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD

Monday 7 September
Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
Tuesday 24 November
Venue: East Midlands Conference Centre, Beeston Lane, Nottingham NG7 2RJ
CPD hours: 8
Fee: £355 per day
Speaker: Mark Dunning MA VetMB PhD CertSAM DipECVIM-CA MRCVS

These three courses will discuss cases commonly encountered in primary care practice including weight loss, lethargy and exercise intolerance, respiratory disease, intestinal disease, PUPD and endocrine disease. The format of each day’s course is similar, with each one offering different case studies covering relevant medical conditions and themes making attendance at all three courses an attractive option. The courses are designed to help the delegates better understand how to approach a variety of medicine cases and decide on the most effective and up-to-date treatment options. At the end of the course, delegates should no longer consider such cases challenging!

Wound Reconstruction – from Simple Skin Tension Management to More Advanced Flap Techniques
Wednesday 7 October
Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD hours: 8
Fee: £355
Speakers: Jackie Demetriou BVetMed CertSAS DipECVS FRCVS

Wound tension and the need for reconstruction is a problem that is faced daily in veterinary practice. This course will discuss the principles of wound tension and its management. Using a combination of these surgical principles, delegates will be taught ways to close wounds under both moderate and severe tension. The lectures will be informative yet based on actual clinical cases with step-by-step photos on how to perform each surgery.

Take advantage of a 25% discount if you book before 28 February 2020

A Practical Guide to Sarcomas and Carcinomas in Dogs
Tuesday 6 October
Venue: East Midlands Conference Centre, Beeston Lane, Nottingham NG7 2RJ
CPD hours: 8
Fee: £355
Speaker: Chiara Penzo DVM DipECVIM-CA (Oncology) MRCVS

This course is a practical guide for the general practitioner to the correct diagnosis and management of the most frequently diagnosed sarcomas and carcinomas in dogs. The participants will learn through interactive discussion of clinical cases how prognosis for patients suffering from these malignant cancers is affected by clinical stage, and how promptly appropriate therapy is instituted, and what therapy is chosen. Multiple treatment options will be discussed for each neoplastic condition, with emphasis on clinical stage, cost of treatment, prognosis and palliative care.

Challenging GI Cases – A Problem Solving Approach

Wednesday 14 October
Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD hours: 8
Fee: £355
Speaker: Rob Foale BSc BVetMed DSAM DipECVIM-CA FRCVS
This course will provide delegates with a practical case-based approach to those more difficult cases of acute and chronic gastrointestinal disease. A systematic protocol for diagnostic work-up will be demonstrated, and will include how to use the nuances of history and clinical signs to help guide you, as well as what diagnostic tests are appropriate and when to use them.

Medical and Surgical Oncology

Tuesday 3 November
Venue: East Midlands Conference Centre, Beeston Lane, Nottingham NG7 2RJ
CPD hours: 8
Fee: £355
Speakers: Chiara Penzo DVM Dip ECVIM-CA (Oncology) MRCVS
Rob White BSc (Hons) BVetMed CertVA DSAS (Soft Tissue) DipECVS SFHEA FRCVS
This one-day face-to-face course is aimed at general practitioners who have an interest in surgical and medical oncology. The course will provide relevant and practical information on the clinical management of small animal oncology cases seen in general practice. The course will cover basic principles including the best way of obtaining a diagnosis and oncological staging, through to treatment options for commonly identified cancers in the dog and cat. The aim of the course will be to enhance clinical skills and knowledge and improve delegate’s confidence when dealing with what can be both mentally and emotionally challenging cases.

Small Animal Dermatology – New Products and Treatments

Tuesday 10 November
Venue: East Midlands Conference Centre, Beeston Lane, Nottingham NG7 2RJ
CPD hours: 8
Fee: £355
Speaker: Kate Griffiths BVSc CertVD PGDip (MedED) MRCVS
Stephen Shaw BVetMed CertSAD DVD PhD MRCVS
The course aims to bring delegates up-to-date with the new therapeutic options available for managing a range of common skin and ear conditions. The number of new products and drugs used in dermatology has increased markedly in the last few years, and their potential for individual and combined use makes deciding between these, and the safe replacement of older products, difficult. We will therefore discuss how to get the best from the newer products and also discuss updated treatment protocols for more established products.

A Practical Guide to Canine Lymphomas and Mast Cell Tumours

Thursday 12 November
Venue: East Midlands Conference Centre, Beeston Lane, Nottingham NG7 2RJ
CPD hours: 8
Fee: £355
Speakers: Chiara Penzo DVM Dip ECVIM-CA (Oncology) MRCVS

This course is a practical guide for the general practitioner to the correct diagnosis and management of two very frequently diagnosed cancers. The diagnosis of lymphoma and mast cell tumours are also a frequent reason why specialist advice or referral is sought. The course delegates will receive a practical overview of the diagnostic tests and clinical staging for both cancers. The day will include interactive discussion of clinical cases to enhance the learning experience.
Neurology in Small Animals – How to Cope when the Owners Can’t Afford Referral

Friday 13 November
Venue: Dovecote Veterinary Hospital, Castle Donington DE74 2LJ
CPD hours: 8
Fee: £355
Speaker: Mark Lowrie MA VetMB MVM DipECVN MRCVS
Mike Targett MA VetMB PhD DECVN MRCVS

Neurological cases in first opinion practice can appear quite intimidating, especially when referral is not an option for practical reasons. This course will consider small animal neurological patients from the standpoint of a first opinion clinician. An understanding of basic neuroanatomy will be used to explain what can be achieved in general practice in terms of presumptive and definitive diagnoses for the more common presentations. The course will then progress to discuss the rational approach to treatment in cases where advanced imaging such as MRI is not available.

A Practical Guide to Cat Cancers

Thursday 10 December
Venue: East Midlands Conference Centre, Beeston Lane, Nottingham NG7 2RJ
CPD hours: 8
Fee: £355
Speakers: Chiara Penzo DVM PhD DipECVIM-CA(Oncology) MRCVS

This course, for the general practitioner, is a practical guide to the correct diagnosis and management of the most frequent cancers in cats. The course will be taught using interactive discussion of clinical cases. Subject matter will include the role of the clinical stage in a patient's prognosis, the general and specific options for therapy, and the importance of prompt diagnosis and management of affected cases. For each neoplasm and clinical stage, multiple treatment options will be discussed, including both palliative options and those to suit the expectations and budget of the client.

Stepping Stones CPD – Your Next Step Towards Clinical Success

We are excited to launch our new, innovative CPD programme ‘Stepping Stones’. Aimed to develop new graduates to the next step in their career, or as a refresher after a career break or even changing disciplines. The CPD days will combine a mixture of lectures, small group teaching and practical elements, developed and delivered by our friendly in-house CPD team of experienced practitioners, CertAVP holders, as well as recognised specialists. The days are designed to be highly applicable to first opinion practice, focussing on common presentations, with tips and tricks to help you evolve as a competent and confident general practitioner. We hope to deliver a series of fun, interactive and relevant CPD like you’ve never experienced before.

Meet the Stepping Stones Team...
Louise Corah BSc BVMedSci BVMBVS MRCVS AFHEA PhD
Thomas Hackney BVSc PGCert MRCVS
Lindsey Harland BVetMed CertAVP MRCVS
Lucy Hughes MA Vet GP Cert (Ophthal) CertAVP MRCVS
Peter Graham BVNS CertVR PhD DipECVCP MRCVS
Alyson Quieros BVSc CertAVP (Veterinary Dermatology) MRCVS
Stephanie Richardson MA BVetMed CertAVP MRCVS
Rob White BSc BVetMed CertVA DSAS (Soft Tissue) DipECVS SFHEA FRCVS

Lumps, Holes and Haemorrhage... How to Improve your Soft Tissue Surgical Skills
Wednesday 6 May
Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD Hours: 8
Fee: £300
This day combines practical sessions and lectures focussing on:
- Surgical approach to lumps in practice
- Practical cytology, is your FNA diagnostic?
- Practical tension relieving techniques
- Wound management
- Building confidence for bitch speys – both big and small

It’s Right There in Front of you... Dealing with Dermatology and Ophthalmology in Practice
Tuesday 16 June
Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD Hours: 8
Fee: £300
If you dread skin and eye cases, this day is for you! Focussing on a logical approach to common conditions, practical tips, and building confidence.

Dermatology:
- Itchy dog but no fleas, what next?
- Ears – a week of drops hasn’t fixed it, what now?!
- Making the most of cytology in practice, it’s not as awful as you think...
- Case-based approach to common skin problems

Ophthalmology:
- Improving your ophthalmic exam
- Which tests to do when
- Practical approach to eye ulcers
- Case-based approach to common eye problems

All Stepping Stones courses take place at the School of Veterinary Medicine, Sutton Bonington Campus. Early booking is advised. Each course is priced at £300; however, a 25% discount applies for bookings received by 28 February 2020.
To Cut or Not to Cut? – That is the Question! Decision Making in GI Cases

Tuesday 14 July
Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD Hours: 8
Fee: £300

Rarely a day goes by without seeing a vomiting dog or an animal with diarrhoea. This course aims to develop your decision making abilities and build your confidence in assessing these cases.

- Initial approach to vomiting and diarrhoea
- Is it medical or surgical?
- Interpretation of abdominal imaging
- Are your bloods helpful?
- Introduction to intestinal surgical techniques
- Video of an exploratory laparotomy
- End-to-end anastomoses practical

GFAST Saves Lives! ECC Techniques in Practice

Thursday 13 August
Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD
CPD Hours: 8
Fee: £300

This course will develop your skills in emergency and critical care, helping to reduce your stress when dealing with emergency cases in practice.

- What is GFAST and how can it help you in practice? A hands-on session
- Approach to the collapsed/dyspnoeic patient
- Approach to a seizuring dog-initial stabilisation
- Clinical skills for the emergency and critical care patient

Take advantage of a 25% discount if you book before 28 February 2020

All Stepping Stones courses take place at the School of Veterinary Medicine, Sutton Bonington Campus. Early booking is advised. Each course is priced at £300; however, a 25% discount applies for bookings received by 28 February 2020.
Evidence-based Veterinary Medicine

Using an Evidence-based Approach in your Practice

Monday 24 February 2020

Venue: School of Veterinary Medicine and Science, Loughborough LE12 5RD

CPD Hours: 65

Fee: £699 for Veterinary Surgeons, £399 for Veterinary Nurses

Speakers: Marnie Brennan BSc (VB) BVMS PhD PGCHE DipECVPH (PM) FHEA MRCVS

Make the most of this fantastic opportunity to understand what evidence-based veterinary medicine is, how you can achieve it practically, and apply it across all aspects of your work.

This training has three distinct components and will be delivered through a flexible mixture of online tutorials, distance learning and in person workshops with excellent guidance and support provided throughout. You also get free online access to the library at Nottingham for the duration of the course.

The three components of the course are:

1. What is evidence-based veterinary medicine and why is it important?
2. How do I find and appraise the evidence?
3. How do I successfully apply the evidence-based veterinary medicine approach to my practice?

Component 1: What is evidence-based veterinary medicine and why is it important?

This is designed as an introductory session to give delegates an overview of what evidence-based veterinary medicine is and why it is important. Delegates will be able to complete a self-assessment exercise to determine their knowledge prior to starting the course. Delegates will be able to use the knowledge gained in the course to think about how the principles of evidence-based veterinary medicine can be integrated into their own environment, with support from course tutors. The course will be a combination of directed online learning, with a real-time online tutorial.

Anticipated time commitments:
- Directed online learning – 10 hrs
- Online tutorial – 1.5 hrs
- Completion of delegate task – 2 hrs

Component 2: How do I find and appraise the evidence?

In order to practice evidence-based veterinary medicine, we need to be able to find, understand and appraise the evidence that is available to us. This part of the course gives a very practical approach to finding and appraising evidence, and will provide the skills needed to answer real-world, clinical questions relevant to daily veterinary work. The knowledge and skills gained will serve delegates throughout their whole careers and can be taken back to the workplace and shared with others. This component of the course will be a 2 day in person workshop and will ensure the evidence-based approach is both achievable and time efficient.

Anticipated time commitments:
- Preparatory work – 3 hrs
- In-person 2-day workshop – 14 hrs
- Completion of delegate task – 15 hrs

Component 3: How do I apply the evidence-based veterinary medicine approach to my practice?

In this component, the application of evidence into practice is the focus, starting with what a clinical audit is and how you can conduct one in practice. This also involves measuring the impact of any changes made in the workplace. This part of the course is focused on how delegates can apply some of the principles and skills of evidence-based veterinary medicine in their workplace – it is about making evidence-based veterinary medicine a practical reality. This can be one of the most challenging, yet satisfying, aspects of evidence-based veterinary medicine as it is about changing the way we, and our colleagues, do something or introduce something new. This is vital if we are to improve patient care and job satisfaction. This component will be a mixture of directed online learning, using pre-prepared resources by the CEVM team, as well as a real-time online tutorial.

Anticipated time commitments:
- Directed online learning – 15 hrs
- Online tutorial – 1.5 hrs
- Completion of delegate task – 3 hrs
MSc/PGDip Veterinary Physiotherapy

Study the theory and practice of veterinary physiotherapy, leading to a professional qualification.

Overview:
An interactive weekend based course, starting from early September. It is run over two years part-time (PGDip) with additional research project year (MSc).

Content:
Includes theoretical and practical based sessions. Work-based learning days, clinics and placements provide experience with various qualified physiotherapists from all over the country. Learn hands-on techniques alongside using electrotherapy in practice.

The modules covered include:
- Foundations of professional practice
- Anatomy and physiology
- Investigating pathophysiology
- Foundations of clinical practice
- Applied clinical skills
- Project proposal and development
- Clinical reasoning and reporting

Entry Requirements:
Degree at or above 2:2, or international equivalent, in a relevant subject. Prior experience may be considered for mature applicants. Requires knowledge of animal care/handling through a minimum work experience requirement of 3 weeks with horses and 3 weeks with dogs, along with a minimum of 6 days at a veterinary practice.

IELTS – 7.5 (no less than 7.0 in any subject.)
Suitable for musculo-skeletal practitioners, veterinarians, veterinary nurses or those with an interest in rehabilitation.

Assessments:
A spiral curriculum is employed to ensure competency is achieved and assessed throughout the course by summative and formative work. Assessments are via written work, portfolios of progression and by completing clinic days and placements in addition to the weekend teaching. For the PGDip, you’ll need to complete 120 credits of taught modules over two years. For the MSc, you’ll need to complete the PGDip then study a third year research project taking you to 180 credits.

Facilities:
- Based at Nottingham Veterinary School, Sutton Bonington Campus
- Weekend contact days alongside external placements and clinics
- Small group practical sessions
- Dissections
- Anatomical specimens
- Stables and kennels
- Experienced external lecturers
- Clinical skills teaching room
- Supporting notes

“
The course is a brilliant mix of practical, hands-on skills with animals and high levels of academic challenge. With expert tutors and amazing resources at the vet school, it’s a great place to learn.”

Alison Nichols, MSc Veterinary Physiotherapy Student
